1 - Referenced Documents

Table 1 below is a list of all specifications that are components to this one. Each of its entries were designed as an interchangeable part, to be used in context for this specification, or others like it:

Specification Number	Nomenclature
GSRM-PL-1	General Requirements, Polish Maps

Table 1: Bill of Materials

If any part of any documents listed in Table 1 conflict with this specification, then this specification shall assume priority.

2 - Definitions

This section is intentionally left blank.

3 - Background

This Age of Empires II random map is an “odd-numbered backup” for a Poland-themed map collection. It is designed to be simpler than peer thematic locations, and is intended to be featured only if another should fail to be ready in time. Thematic distinction is achieved by layering a fractal discovered by Polish mathematician Waclaw Sierpinski atop a legacy AOE2 map.

4 - Overview

This component specification defines requirements of a Polish Arabia map, with mysterious triangular fractal “Nazca Line” style terrain patterns.

5 - General Requirements

The requirements of GSRM-PL-1 apply unless superseded by this specification.

6 - Rule Changes

This section is intentionally left blank.

7 - Land Configuration

Sierpinski Arabia shall be arranged in the style and approximation of Figure 7 below:

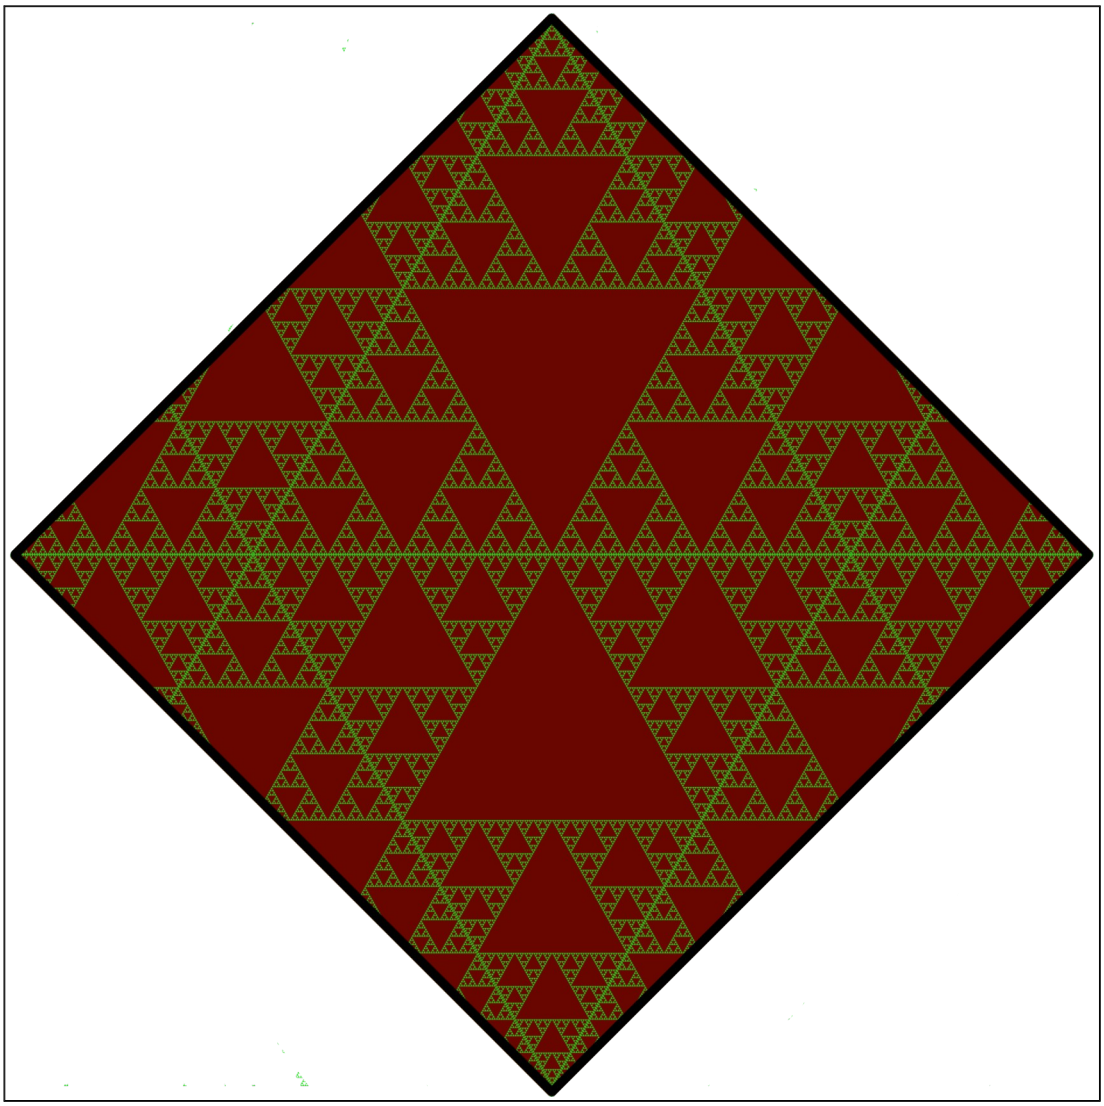

Figure 7: Sierpinski Arabia Configuration

7.A - Zoning

In this way, two zones are established, described as follows:

7.A.1 - Canvas

The crimson area.

7.A.2 - Ink

The green area.

7.B - Origin of Player Lands

The *Origin of Player Lands* shall be placed without regard to zone.

7.C - Randomizations

Ink (§ 7.A.2) randomized with the following constraints:

7.C.1 - Origin

The origin shall be coincident with position (50, 50) – no variation allowed.

7.C.2 - Tessellation

Fractal seed block(s) shall be arranged without overlap or void – no variation allowed.

7.C.3 - Rotation

Fractal seed block(s) shall be oriented with ten, twelve, or sixteen equally spaced angles across a full rotation.

7.C.4 - Magnification

Fractal seed block(s) shall be large enough to ensure that sufficient inward layering is present to meaningfully represent a “Sierpinski Triangle”.

7.C.5 - Resolution

The number of inward fractal layers shall be selected to ensure that no line overlaps or merges with others to form 2D shapes.

7.C.6 - Volume

All parameters described in §7.C.3, §7.C.4, and §7.C.5 shall be maximally varied, such that their pre-computed instructions inflate script file size to at least 2,000 kb. These instructions shall be reasonably lean with each unique configuration having a matching set of instructions without excess parameters.

8 - Elevation

Clumps up to Elevation 7 shall be scattered across the map, without regard to zone.

9 - Terrain

9.A - General

Sierpinski Arabia shall consist of open land terrain, with player-assigned forests and scattered neutral forests. Terrains shall respect seasons defined in GSRM-PL-1.

9.B - Mini-map

9.B.1 - Canvas

The Canvas shall appear light or dark green on the minimap, regardless of season.

9.B.2 - Ink

The Ink shall appear tan on the minimap regardless of season, with only one exception: within the radius of the player-assigned forests, the Ink shall appear the same minimap color as the Canvas.

In this way, Sierpinski triangles are exhibited, except where such a pattern would interfere with the readability of immediate player base areas.

10 - Objects

10.A - Starting Units

Each player shall start the game controlling objects defined by Table 10.A:

Object	Per Applicable Specification	Distance from *Origin of Player Lands* [tiles]	Quantity
Town Center	~	0	1
Herdable	GSRM-PL-1	2 to 3	4
Villager	~	6	3
Harmful Scout	GSRM-PL-1	4 to 9	1

Table 10.A: Starting Player-Controlled Objects

10.B - Resources

Sierpinski Arabia shall possess standard resources, commensurate with vanilla Arabia.
