1 - Referenced Documents

Table 1 below is a list of all specifications that are components to this one. Each of its entries were designed as an interchangeable part, to be used in context for this specification, or others like it:

Specification Number	Nomenclature
STND-002	General Requirements, Random Maps
STND-003	Competitivity Scoring, Random Maps
STND-004	Program Reqs., Alchemy AOE Maps

Table 1: Bill of Materials

If any part of any documents listed in Table 1 conflict with this specification, then this specification shall assume priority.

2 - Definitions

The following definitions apply:

- *STND* – Standard. A document that provides definition for an important and commonly recurring feature but does so in a generalized way, which could be used for a variety of applications. For this reason, standards usually do not call out specific communities or events.
- *Melee Damage Reflection* – Unit property whereby a fraction of received melee damage is also dealt back to the attacker in addition to the target.

3 - Background

This section is intentionally left blank.

4 - Overview

This document defines general concepts, styles, and modules for Medieval Polish maps to be used in a thematic Alchemy Alliance Competition.

5 - General Characteristics

The requirements of STND-002 apply unless superseded by this specification.

6 - Rule Changes

This section is intentionally left blank.

7 - Competitivity

Maps shall score a minimum of 120 when evaluated for “Competitivity” through the process of STND-003.

8 - Navigation/Licensing

Maps shall satisfy the programmatic requirements of STND-004.

9 - General Design

9.A - Seasonal Variation

Most of Poland lies on North-Central European plain, with winters of equal severity to other locations previously featured in Alchemy League. Maps reliant on this specification shall exploit seasonal changes to deliver additional strategic complexity – just as history did. Unless otherwise stated, the following game-altering seasons apply with equal chance of representation for all bodies of water –fresh and saline:

9.A.1 - Summer

Ice does not obstruct the creation of docks, nor does it connect opposite shores or islands. The body of water is clear without any ice. This is the Age of Kings “factory default” setting, prior to the introduction of ice as a terrain.

9.A.2 - Fall

Ice does not obstruct the creation of docks, nor does it connect opposite shores or islands. The body of water contains plentiful icy obstructions, complicating navigation by ships, and shifting naval combat in favor of ranged options.

9.A.3 - Winter

Ice obstructs the creation of docks, covering the body of water entirely, connecting opposite shores and islands for land unit movement. Ice may also contain openings to access aquatic resources, such as fish/oysters, but if so, building placement rules are changed to allow the construction of appropriate drop-site(s).

9.A.4 - Spring

The random map has no ice blocking the creation of docks, but a spring thaw has created ice jams in one or more locations, bridging opposite shores and/or islands. This allows land units to transit while isolating ships on either side.

Polish maps shall adjust other terrain/masking to fit the season –even those lacking major bodies of water– but in an entirely cosmetic manner, without impact to strategic choices.

9.B - Elevation

Where practicable, all non-navigable terrain shall be elevated a minimum of 1 over navigable terrain at elevation 0, providing an advantage to land-units and buildings over ships.

9.C - Look and Feel

Polish Maps shall integrate terrains and objects in plausible representation of geography, climate, and habitation of Poland from the 12th, 13th, 14th, and 15th centuries, A. D.. Guidance provided in the following sections, to satisfy this single requirement, but points are not individually inspected.

9.C.1 - Forests

Nearly 60% of today's Polish forests are dominated by Scots Pine – a hardy expansionist that could exploit openings from aggressive timbering and perpetual war. In the Middle Ages, Poland's forests were far more diverse and expansive. They consisted of old-growth broadleaf species, with pines inhabiting poorer soils associated with mountains, beaches, etc.

9.C.1.a - Species

The following types of tree are allowed on Polish Maps, listed in order of increasing pioneer aptitude per Table 9.C.1.a:

Description	Constant IDs	Representative Of
Oak	349, 411, 1248, 1249, 2567	Pedunculate Oak, Sessile Oak
Assorted Deciduous	201, 284, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 1250	Alder, Hornbeam, Beech, Elm, Ash, Poplar, etc., and dead tree variants.
Maple	2027, 2028	Norwegian Maple, Field Maple, Sycamore
Willow	2025	White Willow, Crack Willow
Birch	1717	Silver Birch, Downy Birch
Pine	350, 413, 2731, 2732	Scots Pine, Mountain Pine, Swiss Stone Pine
Bush	302, 1053, 1054	Hazel, Elder, Dogwood, Spindle, Juniper
Reeds	1350	Common Reed, Cattail, Bulrush, Clubrush, Sedge

Table 9.C.1.a: Available Tree Types

9.C.1.b - Swamps

While the listing in Table 9.C.1.a is an excellent hierarchy of altitude and cold tolerance, there is a major exception: some Polish Maps may feature sprawling lakes, river floodplains, and swamps. In those biomes – or close to slow-moving water on any Polish Map – "priority" given to wood resources is presented in the alternate ascending order of Table 9.C.1.b:

Description	Notes
Pine	Pines are not adapted to swamps. Scotts Pine can tolerate wet health or bog, but only barely.
Maple	Maple require well-drained soils, and are higher on this list only because they are thirstier hardwoods.
Oak	Slow growing, even slower to seize wet areas, but more water tolerant than above types.
Birch	Birches, particularly Downy tolerate wet soil.
Assorted Deciduous	Alder and Poplar are strong swamp pioneers.
Willow	Classic "Willow on Riverbank" trope.
Bush	Different subspecies such as "Gray", "Downy", or "Almond" Willows, more tolerant of swamp.
Reed	The ultimate wetland shrub.

Table 9.C.1.b: Swamps to Polish Tree Hierarchy

9.C.1.c - Mixing

No forest should feature fewer than three distinct tree species, with more variety being desirable, as long as all the chosen trees make sense for the location.

9.C.1.d - Proportions

Not all trees from Table 9.C.1.a should be included on any one map. Those at higher altitudes –such as the Southern Mountains – feature few to no Oak trees, which struggle against the harsh conditions, while Birches and Pines are well adapted. Conversely, the old-growth forests of the Central Poland favor

aggressive expansionists such as Oaks over trees whose cold-adaptations came at the cost of warm climate competitiveness.

The following image exemplifies an autumnal mixed forest containing oaks, maples, birches, pines, willows, etc.:

Table 9.C.1.d: Sample Mixed Forest

9.C.2 - Animals

By default, all Animals are forbidden with the only exceptions listed as follows:

9.C.2.a - Livestock

Medieval Poles raised a number of different farm animals. The following are allowed, within or without fences:

- Horses (814, 1356, 1602, 1604, 1606)
- Sheep (594)
- Cows (705, 1596, 1598, & 1600)
- Goats (1060)
- Pigs (1245)
- Chickens (2083, 2085, & 2087)
- Aurochs (1142)

Pheasants (2739) were newly introduced to Poland during the late Middle Ages and are allowed only within fences, with the following exception: when renamed “bird” using string ID 13338 to represent huntable grouses, capercaillies, and the like.

9.C.2.b - Huntable

Medieval Polish countryside teemed with wildlife. The following Huntable animals are allowed:

- Deer (65)
- Moose (2737)
- Ibex (1239)
- Hares (2098, 2099)
- Red Foxes (1955)
- Wild Boar (48)
- Seal (2735)
- Brown “Food Bears” per §9.E.1.

9.C.2.c - Predator

The following Predators are allowed:

- Wolf (126)
- Dire Wolf (89)
- Rabid Wolf (202)
- Lynx (2736)

Note that Brown Bears (486) do not appear among allowed Predators because their skin is instead applied to “Food Bears” per §9.E.1. Recommended for most maps is the standard wolf, but dire and rabid wolves are available as challenging alternatives.

9.C.2.d - Fish

The following freshwater wildlife are allowed:

- Perch (53)
- Salmon (456)
- Shore Fish (69)

The following saltwater wildlife are allowed:

- Dolphin (61)
- Salmon (456)
- Shore Fish (69)

9.C.2.e - Eye Candy

The following decoration animals are allowed:

- Hawk (96)
- Stork (1028)
- Falcon (1056)
- Vulture (1305)
- Wild Horse (835, 2092, 2093, 2094, 2095)
- War Dog (2611)
- Seagulls (303)
- Butterflies (1608, 1609, 1610)
- Raven (2578)

9.C.3 - Settlements

9.C.3.a - Building Styles

A Polish map-pool may need to show a variety of different gaia Settlements, in various sizes and/or stages of development. Table 9.C.3.a attaches key words and descriptions:

Reference Style	Architecture	Dominant Architecture	Description
Feudal	Polish	Feudal Age	Horizontal log and timber, with gray wooden board/split plank roofs.
Castle	Polish	Castle Age	Coursed brown stone or rubble masonry walls, with orange terracotta tiled roofs.
Imperial	Polish	Castle Age	Same as castle-age, but with higher concentration of tall buildings such as towers, kreposts, castles, etc.

Table 9.C.3.a: Polish Buildings & Architecture

9.C.3.b - Evacuation

No movable objects besides abandoned animals shall be present in Settlements – it is presumed that the townspeople fled to avoid a looming battle.

9.D - Random Statements

Polish maps with highly ordered, “scenario feel”, shall implement random sizes of land features/configurations, forests, terrain types, resource storage, etc., through use of random statements or rnd to improve variety offered by the map.

9.E - Modules

The following sections are required thematic options for Age of Empires motifs, such as starting scout, etc.

9.E.1 - Food Bears

This map pack upgrades European brown bears to be formidable and resourceful, in keeping with their Medieval reputation. The following informational sections describe the "Food Bear", with required code to implement at the end.

9.E.1.a - Statistics

Black "Food Bears" possess the following statistics when compared as reference to the standard AOE2 wild boar, per Table 9.E.1.a below:

Property	Brown "Food" Bear	Standard AOE2 Boar
Base Unit	Iron Boar	~
Food Amount	510	340
Behavior	Will relentlessly pursue any unit that harms it or gets too close.	Will relentlessly pursue any villager that harms it. No attack otherwise.
Hit Points	28	45
Armor (melee, pierce)	(3, 3)	(0, 0)
Bonus Damage Resistance	0%	0%
Melee Damage Reflection	100%	0%
Regeneration Rate [HP/sec]	0.25	0
Base Line of Sight	4	4
Speed [tiles/sec] (walk, run)	(0.98, 1.08)	(0.8, 0.96)
Attack	12	7
Reload Time [sec]	2	2
Reference Only: Unloomed Villagers to Defeat	4	3

Table 9.E.1.a: Black "Food Bears" vs Boars

The final row of Table 9.E.1.a is "Reference Only", derived from testing animals configured with matching statistics, and provided for the benefit of players. The test entailed gathering a group of villagers just outside the engagement radius of both creatures, then right clicking to attack. Sending the quantity of indicated villagers would result in the defeat of the hunted animal, with micromanagement reducing casualties. Results vary depending on RNG/pathing but improve dramatically with loom. Note that the redesigned Brown Bear is slightly stronger than a vanilla AOE2 boar.

9.E.1.b - Hero Glow

Brown “Food Bears” have a golden aura characteristic of hero units, to remind players of their unique properties. Figure 9.E.1.b demonstrates:

Figure 9.E.1.b: Sample Glowing “Food Bear”

9.E.1.c - Code

Unit shall be configured through the lines of script in §10.A.

9.E.2 - Whales

The Polish coastline is hundreds of miles “inland” from the strait of Denmark. Although Whales can access the Baltic Sea, its low salinity means they struggle to stay afloat, and have no prey to eat. Witnessing a whale from Polish soil was regarded as divine providence. From the animal’s perspective, it was either lost and distressed, or already dead. This section describes how resources may be derived from beached whales, whose remains were the lawful property of King and Church.

9.E.2.a - Goods

A single beached whale was like a goldmine, containing a wealth of resources that Medieval Poles could refine into finished goods. Table 9.E.2.b summarizes:

Whale Raw Resource	Finished Goods
Meat	Vast Quantities of Lent-Permissible Salted Meats. Luxury tongue-meat for kings/nobles.
Blubber	High Quality Lamp Oil, Low Quality Industrial Lubricant, Leather Tanning Agents, Waterproofing Agents, Medicinal Salves, Soaps
Skeleton	Whale bones for fence-posts, curved beams for buildings, artisan carving (combs, knife handles, buttons, chess-pieces, etc.), and housings for local church reliquaries.
Skin	Cordage for rigging, anchors, and construction, as well as industrial sewing thread.
Special	Baleen for armor & dense brushes, Ambergris for perfumes & medicines.

Table 9.E.2.b: Beached Whale Resources

While the food derived from a beached whale depended on its state of decay, industrious Medieval villagers salvaged everything else, no matter how revolting or hazardous. To reflect this, beached whales provide both food and gold.

9.E.2.b - Yields

Beached Whales yield the following of both resources, depending on season:

Season	Food Range	Gold Range
Winter	4000 to 7000	5000 to 18000
Spring	2500 to 5500	4500 to 19000
Summer	800 to 3000	4000 to 20000
Fall	2000 to 5000	4500 to 19000

Table 9.E.2.b: Beached Whale Resources

Note that the stored food is largely dependent on season, with colder seasons providing whale carcass refrigeration prior to discovery.

9.E.2.c - Size

Beached Whales occupy a 2x2 square tile when harvested for food, and 1x1 when harvested for gold.

9.E.2.d - Occlusion

Unit outlines visible behind the gigantic carcass.

9.E.2.e - Code

Unit shall be configured through the lines of script in §10.B.

9.E.3 - Proto-Hussar

Polish hussars did not exist during the Middle Ages, particularly not in the dark ages where a thematic scout is important. Earlier option provided by this module:

9.E.3.a - Statistics

The Proto-Hussar consists of a modified/reskinned Unit 1819 (Ismail), to achieve the following properties, compared to the Dark Age Eagle Scout:

Property	Statistics	Dark Age Eagle Scout
Line of Sight [tiles]	8	5
Move Speed [tiles/second]	1	1.1
Hit Points	12	50
Armor (melee, pierce)	(1,3)	(0,2)
Attack	8	4
Reload Time [seconds]	4	2
Range [tiles]	0	0
Convertible?	Yes	Yes
Hero Glow	Yes	No
Regeneration [HP/min]	15	0

Table 9.E.3.a: Proto-Hussar Statistics

9.E.3.b - Code

Unit shall be configured through the lines of script in §10.C.

9.E.4 - Horse Scout

Some Polish maps might be nomad-styled and require a harmless scout. This module describes the “Horse Scout” option.

9.E.4.a - Statistics

The Horse Scout is statistically identical to object 814 (Horse A), except with half the vision and twice the health.

9.E.4.b - Skins

The Horse Scout may adopt any color or pattern available in game.

9.E.4.c - Code

Unit shall be configured through the lines of script in §10.D.

9.E.5 - Great Leaders

Official game content includes a number of campaigns devoted to central Europe, particularly Poland and Lithuania. Thus, a number of options exist for heroes in a Polish Map Pack, spread across the centuries.

9.E.5.a - Nature

The Great Leaders exhibited in these Polish Maps are re-skinned, ornamental tropical trees with negative resource storage and blast defense 0. This means they cannot attack or be attacked, block building construction, or be removed by lumberjacks or siege weapons. They also cannot be pathed through, and exist only as a permanently clickable object with information, useful for a historically knowledgeable broadcaster to enrich content.

9.E.5.b - No Glow

Unlike ordinary heroes, these Great Leaders are seen as trees by the game and cannot glow.

9.E.5.c - Presentation

The Great Leaders provide name and portrait in the usual location, with hitpoints as the date of birth and negative date of death in resource storage.

9.E.5.d - No Claims

The appearance of a Great Leaders on a Polish Map should not be construed as a definitive statement that he or she was physically present in that exact location, way, or at a specific time. The maps have done their best to showcase people who had impact on Polish history, matching key players against visited regions and the timings of various battles or signed treaties ... but cannot claim – because of game design constraints or lack of medieval records – to be 100% accurate.

9.E.5.e - Access

Table 9.E.5.e shows the identification strings ("ID_STR") associated with various heroes that may be required on Polish maps:

Number	Name	#const ID_STR
1	Hermann von Salza	HvS
2	Friedrich von Wallenrode	FvW
3	Kuno von Lichtenstein	KvL
4	Ulrich von Jungingen	UvJ
5	Kestutis of Lithuania	KoL
6	Algirdas of Lithuania	AoL
7	Vytautas of Lithuania	VoL
8	Zawisza the Black	ZtB
9	Zbigniew of Olesnica	ZoO
10	Boleslaw III Wrymouth	BtW
11	Casimir III Wielki	CtW
12	Wladyslaw II Jagiello	WsJ
13	Casimir IV Jagiellon	CfJ
14	Zygmunt I Stary	ZfS
15	Jan Zizka of Trocnov	JZT
16	Jalal ad-Din	JaD

Table 9.E.5.e: Great Leaders Statistics

Tho place a hero, a map creator need only "create_object ID_STR {…relevant variables…}" within the objects section of the script. It will appear if the prerequisite block of §9.E.5.f is included

9.E.5.f - Code

Units shall be configured through the lines of script in §10.E.
