1 - Referenced Documents

Table 1 below is a list of all specifications that are components to this one. Each of its entries were designed as an interchangeable part, to be used in context for this specification, or others like it:

Specification Number	Nomenclature
<u>GSRM-FIW-1</u>	General Requirements, FIW Maps

Table 1: Bill of Materials

If any part of any documents listed in Table 1 conflict with this specification, then this specification shall assume priority.

2 - Definitions

The following definitions apply:

- *Origin of Player Lands* – Location of starting units.

3 - Background

This Age of Empires II random map re-creates the strategic portage at Fort William Henry, as it may have looked in the 1750s at the height of the French and Indian War. Lake George features prominently, draining Northward into the St. Lawrence River, while The Hudson River (Glenn's Falls) drains Southward into the Atlantic through Manhattan.

The name "Horican" is an adaptation of different native words referring to the lake and was immortalized by James Fenimore Cooper's 1826 action novel "The Last of the Mohicans", set in this location.

4 - Overview

This component specification defines requirements for a pilgrims style map, inspired by the area surrounding Lake George in the Adirondacks.

5 - General Requirements

The requirements of GSRM-FIW-1 apply unless superseded by this specification.

6 - Rule Changes

6.A - Resize Domain

Horican shall be resized to twice the ordinary dimensions (e. g. a “TINY” map, which is normally 120x120 tiles becomes 240x240 tiles, and so on).

6.B - Transport Canoe

Horican shall reskin the antiquity transport ship (2148) to resemble a canoe (778).

7 - Land Configuration

Horican shall be arranged per Figure 7 below:

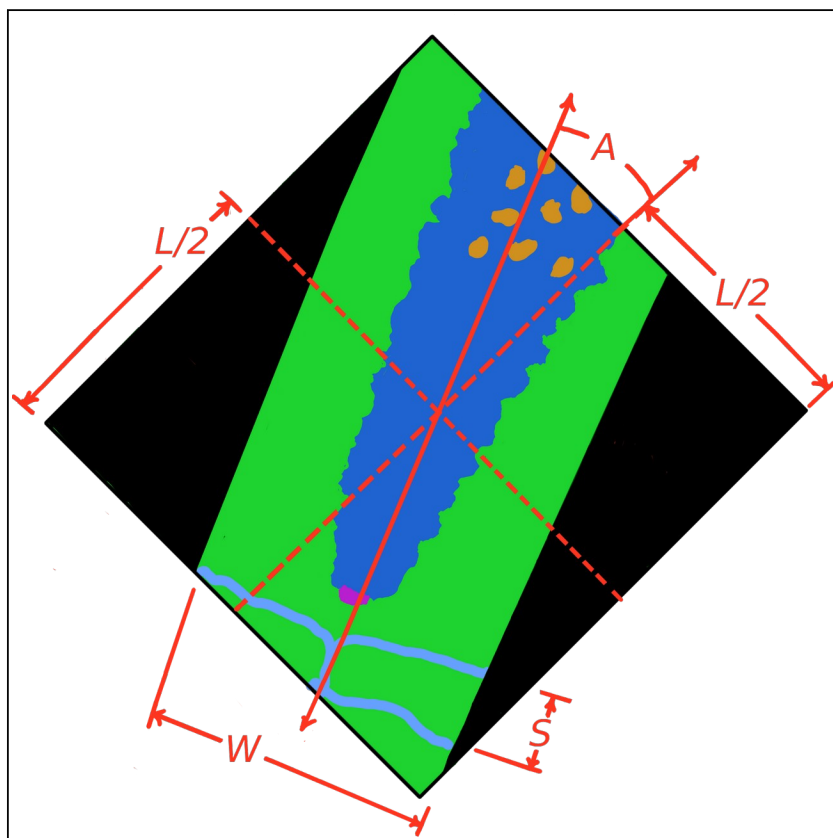

Figure 7: Horican Configuration

7.A - Zoning

In this way, six zones are established, described as follows:

7.A.1 - Lake

The dark blue area.

7.A.2 - River

The light blue area.

7.A.3 - Overlook

The purple area.

7.A.4 - Islands

The tan area. The number of such pockets shall be equal to 8, regardless of player count. This is the *Origin of Player Lands*.

7.A.5 - Landscape

The green area.

7.A.6 - Forbidden

The black area.

7.B - Origin of Player Lands

This section is intentionally left blank.

7.C - Randomizations

7.C.1 - Rotation

Angle “A” shall have no fewer than eight points between and including 0 to 90 degrees.

7.C.2 - Domain

Linear dimension “W” shall be selected such that the un-rotated area of the Forbidden Zone (§7.A.6) is 50 +/- 10% of the rescaled area described in §6.A. The variation in this figure shall include no fewer than 8 possibilities of equal probability.

7.C.3 - Gap

Randomness for linear dimension “S” shall be awarded if practicable, while ensuring that at least three arms of the River Zone (§7.A.2) intersect the Forbidden Zone (§7.A.6) within the other constraints of this section.

8 - Elevation

8.A - Lake

The Lake shall be Elevation 2.

8.B - River

The arms of the River closest to the Lake shall be Elevation 2. The arms of the River furthest from the Lake shall be Elevation 0. The inflection point located at ~“S/2” shall exhibit a dramatic transition between the two aforementioned elevations.

8.C - Overlook

The Overlook shall be Elevation 3.

8.D - Islands

The Islands shall be Elevation 3.

8.E - Landscape

Landscape elevation shall vary locally, with each parcel adopting the elevation of the closest adjacent zone + 1, with two exceptions:

- Same elevation as the Overlook where adjacent.
- Beyond inward (toward center of map) distance “S” from the River, gradual transition to Elevation 6, with scattered hills to Elevation 7.

8.F - Forbidden

The Elevation of this zone is immaterial.

9 - Terrain

9.A - Lake

The Lake shall consist of seasonal water per GSRM-FIW-1.

9.B - River

The River shall be unbuildable and undockable, but fully walkable by land units. The selection of terrains shall be such that two rotationally symmetric arms resemble water, while the other two resemble rock. In this way, the river looks realistic with clear start and end, but functional symmetry is assured.

9.C - Overlook

The Overlook shall consist of open land terrain, with emphasis on constructed or trampled surfaces.

9.D - Islands

The Islands shall consist of open land terrain, with small scattered forests providing space for Town Center construction.

9.E - Landscape

The Landscape shall consist of open land terrain, with scattered forests that become more dense with increasing elevation.

9.F - Forbidden

The Forbidden shall consist of DLC_BLACK and be inaccessible to all player-controlled units.

10 - Objects

10.A - Starting Units

Each player shall start the game controlling objects defined by Table 10.A:

Object	Per Applicable Specification	Distance from <i>Origin of Player Lands</i> [tiles]	Quantity
Ox Wagon	<u>GSRM-FIW-1</u>	N/A	1
Herdable	<u>GSRM-FIW-1</u>	N/A	3
Harmless Scout	<u>GSRM-FIW-1</u>	N/A	1
Antiquity Transport Ship	~	N/A	1

Table 10.A: Starting Player-Controlled Objects

Note that per §7.A.4, Starting Units would be placed on Islands, whose terrain is not compatible with naval units. Any starting naval units shall spawn in the nearest available water terrain to the other player-assigned starting objects.

10.B - Resources

10.B.1 - River

The River shall contain only cosmetic shore-fish atop water-resembling terrains.

10.C - Fort

A palisade-walled fortification per GSRM-FIW-1 shall be placed on the Overlook described in §7.A.3.

10.D - Glenn's Falls

The dramatic transition in River elevation described in §8.B shall contain a collection of rock and waterfall objects to represent this second cataract in the Hudson river.
