1 - Referenced Documents

Table 1 below is a list of all specifications that are components to this one. Each of its entries were designed as an interchangeable part, to be used in context for this specification, or others like it:

Specification Number	Nomenclature
<u>GSRM-AK-3</u>	General Requirements, Alaska Maps

Table 1: Bill of Materials

If any part of any documents listed in Table 1 conflict with this specification, then this specification shall assume priority.

2 - Definitions

The following definitions apply:

- *Origin of Player Lands* – Location of town center.

3 - Overview

This component specification defines requirements for a river valley with small lakes representing Chena Hot Springs in an Alaska map pack.

4 - General Characteristics

The requirements of GSRM-AK-3 apply unless superseded by this specification.

5 - Rule Changes

This section is intentionally left blank.

5.A - Buildable Shallows

Any terrain that is both navigable by ships and walkable by land units shall allow for the construction of any building traditionally available in the technology tree.

6 - Land Configuration

Chena Hot Springs shall be arranged per Figure 6 below, with all blue shades representing water:

Figure 6: Chena Hot Springs Configuration

6.A - Zoning (Definitions)

Four zones are established, described as follows:

6.A.1 - River

Zone coinciding with the azure area of Figure 6.

6.A.2 - Super Glade

Zone coinciding with dark green area that falls along the path of the River and is approximately the same width. There shall be a 50% chance of the Super Glade spawning in the opposite configuration to what is shown in Figure 6 (E. G. Left vs Right).

6.A.3 - Mountain Range

Zone coinciding with large, diametrically opposed tan regions, not bordering any blue and intersecting the edge of the map.

6.A.4 - Player Lands

Any area not included in the other zones.

6.B - Randomizations

This section is intentionally left blank.

7 - Elevation

Chena Hot Springs is a river valley with the following characteristics:

7.A - River

The River shall be elevation 0.

7.B - Super Glade

The Super Glade shall be elevation 3 to 4.

7.C - Mountain Range

The Mountain Range shall have minimum elevation of 6.

7.D - Player Lands

The Player Lands shall rise to a minimum of elevation 4 above the river, with occasional hills rising at least 1 but not more than 2 above such valley plains.

8 - Terrain

Forest on Chena Hot Springs shall be primarily boreal (pine trees) with allowance for some temperate, deciduous trees. Hills shall be heavily forested, with valley plains having few trees. The following additional terrain requirements apply by zone:

8.A - River

The River shall consist of terrains which are inherently navigable **and** walkable, commonly referred to as “shallows”, but with a variant whose appearance is reasonable for this location.

8.B - Super Glade

The Super Glade shall consist almost entirely of forest-class terrain.

8.C - Mountain Range

Core Mountain Range terrain (the tan area of Figure 6) is immaterial, but shall be wreathed in forest-class terrain with minimum thickness 5 tiles.

8.D - Player Lands

Player Lands shall consist primarily of open land terrain, with scattered deep-water lakes. Each player shall receive a deep-water lake occupying a round areas of 75 to 100 tiles.

9 - Objects

Most objects are at the discretion of the map creator, balancing thematic interests against strategic variety. The explicit requirements for this map are few but listed below.

9.A - Starting Units

Each player shall start the game controlling objects defined by Table 9.A:

Object	Per Applicable Specification	Distance from <i>Origin of Player Lands</i> [tiles]	Quantity
Sheep	~	~	4
Villager	~	~	8
Harmless Exploration Unit	<u>GSRM-AK-3</u>	~	1

Table 9.A: Starting Player-Controlled Objects

Player-controlled starting units shall be positioned along the same bank of the river, with no individual unit being more than 20 tiles from any other. For configurations of equally opposed teams, each team shall have their own bank, opposite from the enemy team.

9.B - Starting Buildings

Each player shall begin the game with a single dock, extending into the large lakes described by §8.D. Each of these docks shall have access to 1 deep fish and 3 shore fish.

9.C - Mountain Ranges

Mountain objects of appropriate appearance shall populate the core Mountain Range terrain in sufficient density for it to be impassible.
