1 - Referenced Documents

Table 1 below is a list of all specifications that are components to this one. Each of its entries were designed as an interchangeable part, to be used in context for this specification, or others like it:

Specification Number	Nomenclature
<u>GSRM-AK-3</u>	General Requirements, Alaska Maps

Table 1: Bill of Materials

If any part of any documents listed in Table 1 conflict with this specification, then this specification shall assume priority.

2 - Definitions

The following definitions apply:

- *Origin of Player Lands* – Location of town center.

3 - Overview

This component specification defines requirements for a baltic/ghost lake-style map representing Chandalar Lake in an Alaska map pack.

4 - General Characteristics

The requirements of GSRM-AK-3 apply unless superseded by this specification.

5 - Rule Changes

This section is intentionally left blank.

5.A - Buildable Ice

On the Winter/frozen variation of the map (see §6.B.2 below), ice terrain shall allow for the construction of Mills/Folwarks, but no other buildings. This Rule Change is not applicable on the Summer/thawed variation due to the absence of ice.

6 - Land Configuration

Chandalar Lake shall be arranged per Figure 6 below, noting that dark blue represents liquid water, azure represents ice, and green/tan represent land terrain:

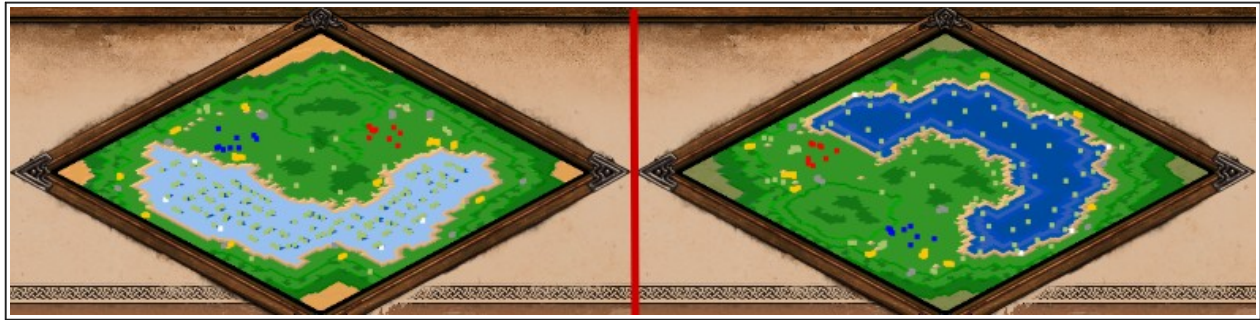

Figure 6: Chandalar Lake Configuration

6.A - Zoning (Definitions)

Three zones are established, described as follows:

6.A.1 - Lake

Large blue or azure area occupying roughly 50% of the map.

6.A.2 - Mountain Range

Tan/olive corner areas.

6.A.3 - Player Lands

Any area that is not part of either aforementioned zones. Contains the *Origin of Player Lands*.

6.B - Randomizations

This section is intentionally left blank.

6.B.1 - Rotational

The map shall be constructed such that angular arrangement of lake and player starting locations is possible for any angle but also immaterial. Player starting locations shall be approximately constant relative to the lake.

6.B.2 - Seasonal

Seasonal variation shall alter the ratio of ice to liquid water on the entire map, strongly influencing fishing/naval investment. Probabilities as follows:

- 50% chance of frozen lake per the left side of Figure 6.
- 50% chance of thawed lake per the right side of Figure 6.

7 - Elevation

7.A - Lake

The Lake shall be elevation 0.

7.B - Mountain Range

The Mountain Range shall have minimum elevation 4, maximum elevation 5.

7.C - Player Lands

Player Lands shall be at elevation 1, with gradual rise to corner mountains at elevation 4. Elevation is permitted between player starting locations.

8 - Terrain

8.A - Lake

Terrains depend on season:

- On the “Winter” version of the map, the Lake shall be frozen over and land units shall be able to traverse the ice. Docks shall not be able to be built on the ice, and therefore, no naval units will be able to be created on the lake.
- On the “Summer” version of the map, the Lake shall have characteristics common to water, be dockable, and accessible by naval units but inaccessible by land units (other than those being carried by transport ships).

8.B - Mountain Range

The Mountain Range shall be separated from Player Lands by a minimum of three forest tiles, but may otherwise be any terrain if obscured by objects.

8.C - Player Lands

Player Lands shall be composed of open land terrain appropriate to the season. Forests shall be exclusively boreal (e. g. pine trees or snow pine trees), and not located higher than elevation 3 due to the northern location of the lake and its proximity to the Arctic tree line. Shisp shall be unable to navigate any portion of this zone, including coastline/land-beach terrain of incidental elevation.

9 - Objects

Most objects are at the discretion of the map creator, balancing thematic interests against strategic variety. The explicit requirements for this map are few but listed below.

9.A - Starting Units

Each player shall start the game controlling objects defined by Table 9.A:

Object	Per Applicable Specification	Distance from <i>Origin of Player Lands</i> [tiles]	Quantity
Town Center	~	0	1
Sheep	~	4 to 6	4
Villager	~	4 to 6	3
Harmful Exploration Unit	<u>GSRM-AK-3</u>	6 to 8	1

Table 9.A: Starting Player-Controlled Objects

9.B - Mountain Range

Rocky/Mountainous gaia objects shall be placed in this area to make it impassible and provide a feeling of “enclosure”.
