1 - Referenced Documents

Table 1 below is a list of all specifications that are components to this one. Each of its entries were designed as an interchangeable part, to be used in context for this specification, or others like it:

Specification Number	Nomenclature
<u>GSRM-AK-3</u>	General Requirements, Alaska Maps

Table 1: Bill of Materials

If any part of any documents listed in Table 1 conflict with this specification, then this specification shall assume priority.

2 - Definitions

The following definitions apply:

- *Origin of Player Lands* – Location of town center.

3 - Overview

This component specification defines requirements for an Arena-style map inspired by the area near Dawson City, Canada but used in Alaska map pack due to proximity and cultural overlap. Klondike Mining Camp tells the story of a hostile subarctic wilderness that has been strip-mined for gold, and the conflict over what little remains.

4 - General Characteristics

The requirements of GSRM-AK-3 apply unless superseded by this specification.

5 - Rule Changes

This section is intentionally left blank.

6 - Land Configuration

Klondike Mining Camp shall be arranged per Figure 6 below:

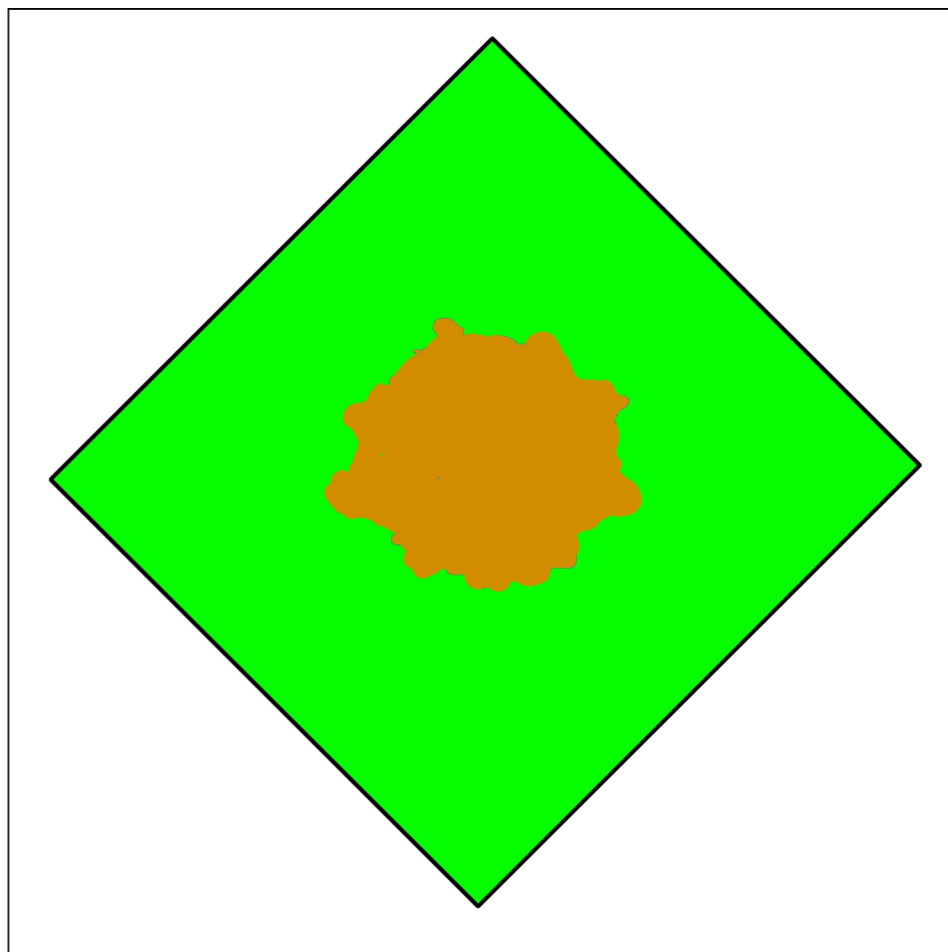

Figure 6: Klondike Mining Camp Configuration

6.A - Zoning (Definitions)

Two zones are established, described as follows:

6.A.1 - Strip Mine

Dark tan area.

6.A.2 - Outland

Any area not belonging to the other aforementioned zones. Contains the *Origin of Player Lands*.

6.B - Randomizations

This section is intentionally left blank.

7 - Elevation

7.A - Strip Mine

The Strip Mine shall be elevation 0, with scattered plateaux up to elevation 2. These plateaux shall be densely arranged to resemble a network of ditches and other excavations.

7.B - Outland

The Outland shall be elevation 2, with a few scattered rings of elevation 0 that avoid the *Origin of Player Lands* by no less than 26 tiles.

8 - Terrain

8.A - Strip Mine

Strip Mine terrain depends on elevation. No forests are allowed:

8.A.1 - Elevation 0

Non-navigable gravel/rock terrain, masked with water or ice, depending on season.

8.A.2 - Elevation 1

Mud terrain, masked with rock, gravel, ice, or snow in combination appropriate for the season.

8.A.3 - Elevation 2

Dirt, trampled grass, or snow terrain, masked with mud, in any combination appropriate for the season. This location may also feature cracked terrain, penalizing the durability of structures built on top of it.

8.B - Outland

The Outland shall consist of any open land terrain with scattered neutral forests matching the location and season. The following are also required:

8.B.1 - Ditches

The depressions described in §7.B shall approximate the terrain layering of the Strip Mine, described in §8.A.

8.B.2 - Village

Area immediately surrounding the *Origin of Player Lands* (within at least 5 tiles) shall have more of a dirt, mud, and/or road appearance, as though it were the pavement of a developing village.

8.B.3 - Highway

A beaten path shall extend from the *Origin of Player Lands* to the edge of the Strip Mine, and be visually distinctive from surrounding terrains.

9 - Objects

Most objects are at the discretion of the map creator, balancing thematic interests against strategic variety. The explicit requirements for this map are few but listed below.

9.A - Starting Units

Each player shall start the game controlling objects defined by Table 9.A:

Object	Per Applicable Specification	Distance from <i>Origin of Player Lands</i> [tiles]	Quantity
Town Center	~	0	1
Sheep	~	2 to 3	4
Villager	~	6	3
Harmful Exploration Unit	<u>GSRM-AK-3</u>	6 to 8	1
Fortified Palisade Walls	<u>GSRM-AK-3</u>	15	~

Table 9.A: Starting Player-Controlled Objects

9.A.1 - Gates

At least one gate from walls defined in Table 9.A shall be placed atop the roadway of §8.B.3.

9.B - Mining Village

Eye candy objects and unconvertible gaia buildings in the style of a frontier mining village shall be scattered throughout and around the Strip Mine, as well as the Village described in §8.B.2. These objects may include various houses, yurts, tents, barrels, quarries, siege camp weapons, graves, broken carts, weapon racks, smoke, etc.

9.C - Mountains

Mountain objects with clustered rock/cliff objects shall be scattered within neutral forests.

9.D - Player-Tree Objects

Trees in player-assigned forests reskinned per GSRM-AK-3 to have the appearance of lumber/rubbish piles.

9.E - Resources

9.E.1 - Strip Mine

The Strip Mine shall contain the majority of bonus resources, particularly gold and stone.
