1 - Referenced Documents

Table 1 below is a list of all specifications that are components to this one. Each of its entries were designed as an interchangeable part, to be used in context for this specification, or others like it:

Specification Number	Nomenclature
<u>STND-002</u>	General Requirements, Random Maps
<u>STND-003</u>	Competitvity Scoring, Random Maps
<u>STND-004</u>	Program Reqs., Alchemy AOE Maps

Table 1: Bill of Materials

If any part of any documents listed in Table 1 conflict with this specification, then this specification shall assume priority.

2 - Definitions

The following definitions apply:

- *STND* – Standard. A document that provides definition for an important and commonly recurring feature but does so in a generalized way, which could be used for a variety of applications. For this reason, standards usually do not call out specific communities or events.
- *Melee Damage Reflection* – Unit property whereby a fraction of received melee damage is also dealt back to the attacker in addition to the target.

3 - Overview

This document defines general concepts and styles for supplier-designed “Alaska-themed” maps to be used in an Alchemy AOE Alliance competition.

4 - General Requirements

The requirements of STND-002 apply unless superseded by this specification.

5 - Competitivity

Maps shall score a minimum of 100 when evaluated for “Competitivity” through the process of STND-003.

6 - Navigation/Licensing

Maps shall satisfy the programmatic requirements of STND-004.

7 - General Design

The Alaska Maps shall have an appearance that is plausibly a location within Alaska. The following guidance is provided to achieve such an appearance and perform well under evaluation, but each point will not be individually inspected:

7.A - Appearance

Terrains for Alaska maps should be selected to exemplify the particular biome or climate of the location featured by the custom map. For instance a “Denali” map should contain mountains, and rocky and snowy terrain instead of mangrove shallows, because that is how Denali appears in real life. A “Yukon Forest” map should not contain palm trees, because the Yukon River lies in a northern temperate biome. Eye-candy objects appropriate to the area of Alaska represented, such as totem poles, snowy mountains, dead trade carts, etc. are encouraged.

7.B - Water

Alaska maps should minimize use of navigable terrain where possible, due to the dominance of naval options in AOE2. Maps where water is an inherent component (i.e. Aleutian Islands, Yukon River) should take into consideration any balancing or limitations to avoid giving naval units too strong of an advantage. Note that if a map includes water and it is done well, then this would be an advantage in any map contest, if applicable.

7.C - Elevation

Most non-navigable terrain should be a minimum of elevation 1, above navigable terrain at elevation 0. This provides a much-needed advantage to land-units over ships.

7.D - Random Statements

If an Alaska map has a highly ordered, “scenario feel”, then random sizes of land features/configurations, forests, terrain types, etc., are encouraged through use of random statements to improve variety offered by the map.

7.E - Seasonal Variations

Alaskan maps should include random statements to change the type of terrain and forests to match a “warm” season and a “cold” season, where practical.

8 - Exploration Unit

Definition provided below to standardize flavored starting scout across Alaska maps:

8.A - Harmful

The Alaska Map shall use an Eagle Scout (defined in code as EAGLE_WARRIOR). The parameters of the unit shall be unchanged, functioning exactly as a standard starting Eagle Scout of the Aztecs, Mayans, and Incas.

8.B - Harmless

The Alaska Map shall use any Horse Scout of appearance HORSE, HORSE_B, HORSE_C etc. as defined in code. The parameters of any unit selected from this group shall be unchanged, functioning exactly as a standard Hunnic horse scout on nomad-style maps, but with movement speed 1.2 tiles/sec.

9 - Fortified Palisades

Stone structures are uncommon on the Alaskan frontier, and therefore stone walls or fortified walls are forbidden as map starting objects. To substitute, DLC_FORTIFIED_PALISADE walls shall be used, modified to possess 450 hitpoints.

10 - Lumber Pile Forests

Some locations in Alaska may not be plausible locations for wooded vegetation, due to any combination of the following:

- Proximity to human settlement (overcutting specific forest).
- Extreme North latitude.
- Extreme high elevation.

An Alaska map with at least one of these qualities may implement “Lumber Pile Forests”. Lumber Pile Forests shall contain a blend of tree objects re-skinned as needed to resemble the following objects summarized by Table 10:

Type	Allowed Objects	Total Composition	
		Minimum	Maximum
Lumber	1320	0%	75%
Barricade	1090 (A), 1218 (B), 1219 (C), 1220 (D)	25%	50%
Vegetation	1350 (Tree Reeds), 302 (Bush A), 1053 (Bush B), 1054 (Bush C)	Balance	Balance

Table 10: Lumber Pile Forest Composition

To mitigate player confusion, the numbered objects listed in Table 10 are required to contain stored wood if used on any Alaska map. Lumber pile forests shall be placed on flooring suitable for the season, such as “oak forest” or “snow pine forest” floors.

11 - Bears

Wild boars are not native to Alaska and most of its regions are unsuitable for their habitation; yet “boar” is considered a vital dark-age food source in AOE2. The following sections define a replacement, thematically-appropriate food source (bears) consistent across all maps in an Alaska-themed AOE2 competition.

11.A - Applicability

The following paragraphs apply to what the game calls:

- Black Bears

- Brown Bears
- Polar Bears

Henceforth referred to collectively as “Alaskan Bears”, and differing in statistics from the base game, re-balanced as a predator/boar food source.

11.B - Statistics

Alaskan bears shall possess the following statistics when compared as reference to the standard AOE2 wild boar, per table 11.B below:

Property	Alaskan Bears			Standard AOE2 Boar
	Black	Brown	Polar	
Base Unit	Javelina	Iron Boar	Dire Wolf	~
Food Amount	340	510	600	340
Behavior	Will relentlessly pursue any villager that harms it. No attack otherwise.	Will relentlessly pursue any villager that harms it or gets too close.	Will relentlessly pursue any villager it sees.	Will relentlessly pursue any villager that harms it. No attack otherwise.
Impervious to Villager Arrows?	No	No	Yes	No
Hit Points	23	28	90	45
Armor (melee, pierce)	(0, 0)	(3, 3)	(0, 0)	(0, 0)
Bonus Damage Resistance	0%	0%	100%	0%
Melee Damage Reflection	50%	100%	150%	0%
Regeneration Rate [HP/sec]	0.5	0.25	0.125	0
Base Line of Sight	5	4	4	4
Speed [tiles/sec] (walk, run)	(0.8, 0.96)	(0.9, 1.08)	(0.85, 1.02)	(0.8, 0.96)
Attack	7	12	4	7
Reload Time [sec]	1	2	1	2
Reference Only: Unloomed Villagers to Defeat	2	4	8	3

Table 11.B: Statistics of Alaskan Bears

The final row of Table 11.B is “Reference Only”, derived from testing configured animals from the statistics in the rows above, and provided for the benefit of players. The test entailed gathering a group of villagers just outside the engagement radius of each respective creature, then right clicking to assign attack. To send the quantity of indicated villagers without micromanagement would typically result in the death of one, injury of another, and of course death of the hunted animal. Results vary depending on RNG/pathing but improve dramatically with micromanagement and/or loom. Note that the vanilla AOE2 boar is stronger than the Black Bear, but not as strong as a Grizzly Bear. An “AI analysis” of the number of villager required to defeat Black Bears (using bows), Grizzly Bears (using bows), and Polar Bears (using knives), is on average 10, 20, and 40 respectively. Thus per Table 11.B, although Alaskan bears are significantly (for gameplay-balance purposes) weaker than their real-life counterparts, their power levels are scaled realistically.

11.C - Behavior

The behavior described in Table 11.B shall apply to all units except kings, monks, siege weapons, and scout cavalry/eagle scout classes. Unlike previous versions, Alaskan Bears shall *not* be on defensive stance through “set_gaia_unconvertible”.

11.D - Spacing Fairness

Player-assigned bears shall satisfy one of the following conditions, in relation to static food sources (berries or huntable animals):

- Placed within 3 tiles
- Avoid by more than 12 tiles

In this way, assigning bears to players as a food source has no fairness detriment on the number of early-game mills built by each player.

11.E - No Unmodified Bears

To ensure consistency across the Alaskan map pack and avoid player confusion, no map shall include unmodified bears that do not satisfy the requirements of this specification. If traditional gaia predators are desired, the “wolf” unit is recommended. In addition, no map shall include Javelinas, Iron Boars, or Dire Wolves, since these units are needed to create the Alaskan Bears.

11.F - Hero Glow

Alaskan Bears shall be given a golden aura characteristic of hero units, to remind players of their unique properties. No other hero properties (such as regeneration) shall be imparted to the bears through the golden aura.

11.G - Sample Code (Reference Only)
