1 - Referenced Documents

Table 1 below is a list of all specifications that are components to this one. Each of its entries were designed as an interchangeable part, to be used in context for this specification, or others like it:

Specification Number	Nomenclature
<u>GSRM-FIW-1</u>	General Requirements, FIW Maps

Table 1: Bill of Materials

If any part of any documents listed in Table 1 conflict with this specification, then this specification shall assume priority.

2 - Definitions

The following definitions apply:

- *Origin of Player Lands* – Location of town center.

3 - Background

This Age of Empires II random map re-creates old Quebec, as it may have looked in the 1750s at the height of the French and Indian War. The decisive “Battle of the Plains of Abraham” was fought in the fields outside this city, during which the supreme commanders of opposing factions (James Wolfe for Britain & Louis-Joseph de Montcalm for France) were tragically killed. British capture of Quebec assured victory in the war and eventual French surrender in Montreal the following year.

The name “Kebec” is derived from the Algonquin word for “where the river narrows”, referring to a choke-point in River St. Lawrence guarded by a steep overlook where the city of old Quebec was built.

4 - Overview

This component specification defines requirements for a city-styled nomad map, a paradox inspired by Old Quebec City.

5 - General Requirements

The requirements of GSRM-FIW-1 apply unless superseded by this specification.

6 - Rule Changes

6.A - Lighthouse Castle

Any castle starting the game under control of gaia shall be reversibly capturable, without the ability to fire arrows, but granted a line of sight whose radius is 1 tile for every 6 tiles of total map edge length (e. g. 20 tile vision radius for 120x120 ‘tiny’ map size).

6.B - Gaia Wonders

The map shall contain a number of impressive stone buildings at its core that release minable gold when destroyed.

6.B.1 - Identification

Any gaia building following the “gold drop” rule change shall be renamed “Wonder”, with matching interface icon.

6.B.2 - Random Health

The random map shall select two values randomly between 0 and 2,000 and then add them. This total shall be assigned as the hit points for all identifiable wonders per §6.B.1.

6.B.3 - Gold Spawn

The amount of gold contained in the pile dropped by the destroyed wonder shall be 0.0005 times the square of its hit points.

7 - Land Configuration

Kebec shall be arranged per Figure 7 below:

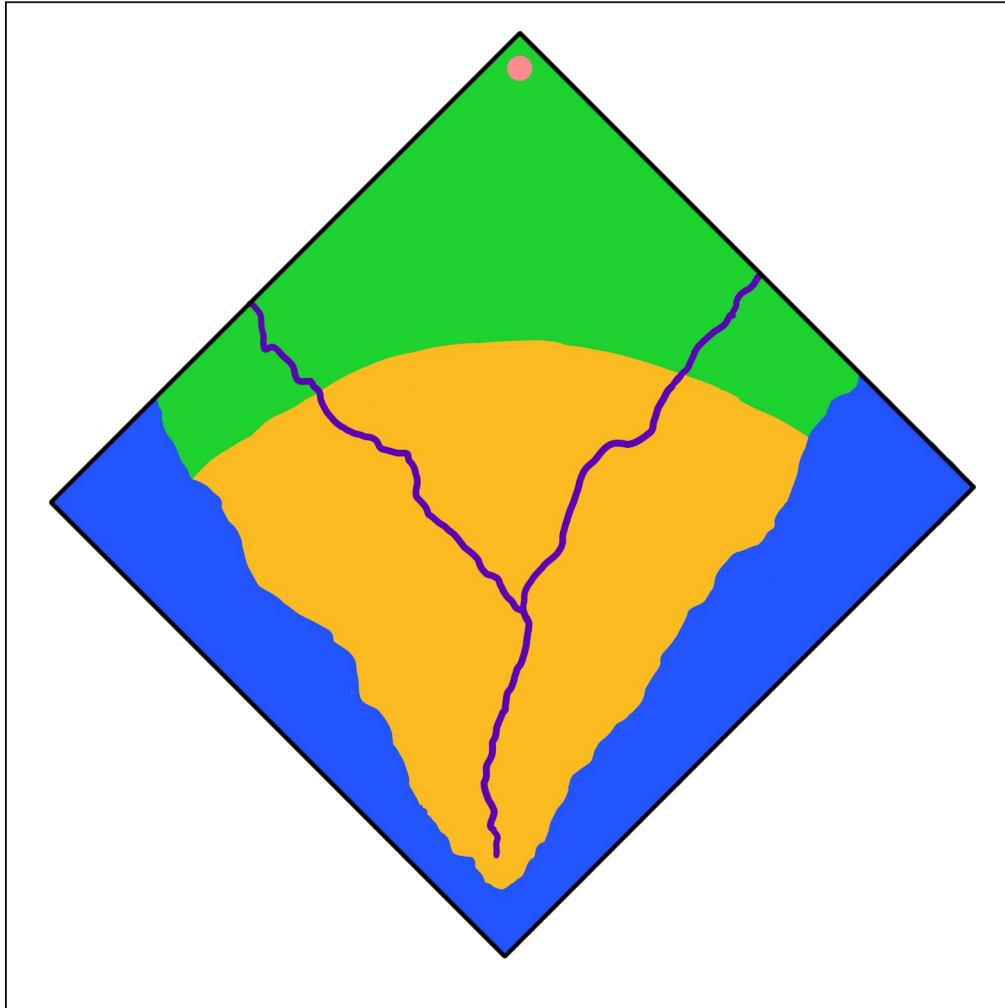

Figure 7: Kebec Configuration

7.A - Zoning

In this way, five zones are established, described as follows:

7.A.1 - Outpost

The pink area.

7.A.2 - Plains

The green area.

7.A.3 - City

The tan area.

7.A.4 - River

The blue area.

7.A.5 - Road

The purple area.

7.B - Origin of Player Lands

This section is intentionally left blank.

7.C - Randomizations

This section is intentionally left blank.

8 - Elevation

8.A - Outpost

The Outpost shall be Elevation 4.

8.B - Plains

The Plains shall be elevation 0 where in contact with the River, rapidly transitioning to elevation 4, with occasional hills up to elevation 5.

8.C - City

The City shall be elevation 0 where in contact with the River, rapidly transitioning to at least elevation 5. Moving in the direction of taper, the peak elevation shall gradually increase to 8.

8.D - River

The River shall be Elevation 0.

8.E - Road

Road elevation shall vary locally, with each parcel adopting the elevation of the closest adjacent zone.

9 - Terrain

10 - Outpost

The Outpost shall have leafy or grassy appearance.

10.A - Plains

The Plains shall be scattered with reed forests and stony or icy/snowy masking. Additionally, the Plains shall transition to neighboring zones in a rocky manner, resembling cliffs, and be un-buildable at elevation 3.

10.B - City

The City shall consist of broken or weathered road terrain, checkered in dirt and occasional grass and tree patches, having rocky cliff-like transition to neighboring zones, and un-buildable at elevation 3. The City also shall feature one “Park” per player, consisting of a large patch of grass with two or three forests. At elevation 8, the City shall consist of exquisite flagstone, in better upkeep than other City road terrains.

10.C - River

River terrains shall adapt to season per GSRM-FIW-1 “Water Body Terrains”, with one exception: if the season would ordinarily permit docking along the River, then localized restrictions shall apply to prevent construction of docks that would obstruct naval units from transiting the channel.

10.D - Road

The Road shall consist of exquisite flagstone.

11 - Objects

11.A - Starting Units

Each player shall start the game controlling objects defined by Table 11.A:

Object	Per Applicable Specification	Distance from <i>Origin of Player Lands</i> [tiles]	Quantity
Villager	~	N/A	3
Herdable	<u>GSRM-FIW-1</u>	N/A	4
Standard Scout	<u>GSRM-FIW-1</u>	N/A	1

Table 11.A: Starting Player-Controlled Objects

As a “nomad” style map, players do not start with Town Centers, and instead the objects described in Table 11.A are scattered randomly across the map.

11.B - Resources

11.B.1 - Variation

Each resource (regardless of if listed within §11.B) shall vary significantly in amount per pile or object. In this way, the Kebec offers greater variety.

11.B.2 - Relics

Relics shall be plentiful --at least 2x the ordinary Arabic volume-- and scattered across the map without bias to any zone.

11.B.3 - Aquatic Resources

11.B.3.a - Fish

If a season would allow players to create fishing ships (see §10.C), then fish shall be scant. Otherwise, fish shall be plentiful.

11.B.3.b - Whales

If a season would allow players to create whaling ships (see §10.C), then whales shall be plentiful. Otherwise, whales are forbidden.

11.B.3.c - Oysters

If a season would allow players to create oystering ships (see §10.C), then oysters shall be plentiful. Otherwise, oysters are forbidden.

11.B.4 - Foxes

Foxes shall be plentiful in the Plains.

11.B.5 - Gold

Kebec shall be devoid of gold piles.

11.C - Outpost

The Outpost shall consist of a small fort per GSRM-FIW-1.

11.D - Old Quebec

Since a colonial city occupies the majority of total map space, the following additional requirements assure authenticity, within the constraints of an Age of Empires II theater:

11.D.1 - Walls

Where bordering Plains, the City shall feature a contiguous “City Wall” (object 370) of single tile thickness.

11.D.2 - Lower Class

At elevation 5 on road/dirt checkering, the City shall consist of a blend of feudal-age (thatched roof) buildings and objects, including blacksmiths, gallows, markets, stables, penned animals, ruined buildings, unkempt shrubbery, etc.

11.D.3 - Middle Class

At elevation 6 on road/dirt checkering, the City shall consist of a blend of castle-age (wooden-shingle roof) buildings and objects, including blacksmiths, mills, markets, stables, penned animals, trade workshops, etc.

11.D.4 - Upper Class

At elevation 7 on road/dirt checkering, the City shall consist of imperial-age (white stone with black slate-shingled roof) buildings and objects, including cathedrals, wonders, keeps, town-centers, markets etc. with minor blend of castle-age buildings.

11.D.5 - Prominence

At elevation 8, the City shall consist of a Frankish castle (representing “Chateau Louis”), surrounded by a stone wall of single tile thickness, opened in the back toward the lower elevations of the City.

11.D.6 - Fortifications

Within 1 to 7 tiles of other zones, the City shall be surrounded by plentiful bombard towers, arranged in an orderly perimeter.

11.D.7 - Docks

Where bordering River, the City shall contain a few docks.
