1 - Referenced Documents

Table 1 below is a list of all specifications that are components to this one. Each of its entries were designed as an interchangeable part, to be used in context for this specification, or others like it:

Specification Number	Nomenclature
<u>STND-002</u>	General Requirements, Random Maps
<u>STND-003</u>	Competitvity Scoring, Random Maps
<u>STND-004</u>	Program Reqs., Alchemy AOE Maps

Table 1: Bill of Materials

If any part of any documents listed in Table 1 conflict with this specification, then this specification shall assume priority.

2 - Definitions

The following definitions apply:

- *STND* – Standard. A document that provides definition for an important and commonly recurring feature but does so in a generalized way, which could be used for a variety of applications. For this reason, standards usually do not call out specific communities or events.

3 - Background

An “Empire State” themed map pack has been expanded to include a more epic and historically significant setting – The French and Indian War; a large portion of which was fought within the modern political boundaries of New York State, United States, allowing re-use of many concepts and locations.

4 - Overview

This document defines general concepts, styles, and modules for supplier-designed “French and Indian War” maps to be used in a thematic Alchemy Alliance Competition.

5 - General Characteristics

The requirements of STND-002 apply unless superseded by this specification.

6 - Rule Changes

This section is intentionally left blank.

7 - Competitvity

Maps shall score a minimum of 120 when evaluated for “Competitvity” through the process of STND-003.

8 - Navigation/Licensing

Maps shall satisfy the programmatic requirements of STND-004.

9 - General Design

9.A - Seasonal Variation

Most French and Indian War battlefields were situated on contested waterways and portages that froze-over during wintertime, requiring a change in tactics. Maps reliant on this specification shall exploit seasonal changes to deliver additional strategic complexity – just as history did. Unless otherwise stated, the following game-altering seasons apply with equal chance of representation:

9.A.1 - Summer

Ice does not obstruct the creation of docks, nor does it connect opposite shores or islands. The body of water is clear without any ice. This is the Age of Kings “factory default” setting, prior to the introduction of ice as a terrain.

9.A.2 - Fall

Ice does not obstruct the creation of docks, nor does it connect opposite shores or islands. The body of water contains plentiful icy obstructions, complicating navigation by ships, and shifting naval combat in favor of ranged options.

9.A.3 - Winter

Ice obstructs the creation of docks, covering the body of water entirely, connecting opposite shores and islands for land unit movement. Ice may also contain openings to access aquatic resources, such as fish/oysters, but if so, building placement rules are changed to allow the construction of appropriate drop-site(s).

9.A.4 - Spring

The random map has no ice blocking the creation of docks, but a spring thaw has created ice jams in one or more locations, bridging opposite shores and/or islands. This allows land units to transit while isolating ships on either side.

French and Indian War maps shall adjust other terrain/masking to fit the season –even those lacking major bodies of water– but in an entirely cosmetic manner, without impact to strategic choices.

9.B - Elevation

Where practicable, all non-navigable terrain shall be elevated a minimum of 1 over navigable terrain at elevation 0, providing an advantage to land-units over ships.

9.C - Look and Feel

French and Indian War Maps shall integrate terrains and objects in plausible representation of geography, climate, and habitation of North America from the 17th and 18th centuries, A. D.. Guidance provided in the following sections, to satisfy this single requirement, but are not individually inspected.

9.C.1 - Forests

9.C.1.a - Species

The following types of tree are allowed on French and Indian War Maps, listed in order of increasing hardness in Table 9.C.1.a:

Description	Constant IDs
Oak	349, 411, 1248, 1249, 2567
Assorted Deciduous	201, 284, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 1250
Maple	2027, 2028
Willow	2025
Birch	1717
Pine	350, 413
Bush	302, 1053, 1054
Reeds	1350

Table 9.C.1.a: Available Tree Types

9.C.1.b - Mixing

No forest should feature fewer than three distinct tree species, with more variety being desirable, as long as all the chosen trees make sense for the location.

9.C.1.c - Proportions

Not all trees from Table 9.C.1.a should be included on any one map. Those at higher latitudes –such as Quebec– feature few to no Oak trees, which struggle against the cold Canadian Winter, while Birches and Pines are well adapted. Conversely, the old-growth forests of the Ohio valley favor aggressive expansionists such as Oaks over trees whose cold-adaptations came at the cost of warm climate competitiveness.

9.C.2 - Animals

9.C.2.a - Livestock

Native Northeastern Americans were hunter-gatherers, and had no animal husbandry prior to European contact, except for domesticating dogs. The following herdable animals are allowed on French and Indian War maps outside of pens, starting under the control of gaia:

- Turkeys (833)
- Geese (1243)

European colonists brought livestock with them to the Americas. The following farm animals are allowed if they satisfy at least one of the following: 1) start inside a pen, or 2) start under the control of players:

- Horses (814, 1356, 1602, 1604, 1606)
- Sheep (594)
- Cows (705, 1596, 1598, & 1600)
- Goats (1060)
- Pigs (1245)
- Chickens (2083, 2085, & 2087)

9.C.2.b - Huntable

Prior to the Columbian exchange, options for huntable animals in Northeast America were limited. Huntable animals forbidden except those listed below:

- Deer (65)
- Hares (2098, 2099)
- Red Foxes (1955)
- Food Bears per §9.E.1

9.C.2.c - Predator

Predators forbidden except those listed below:

- Wolves (126)
- Dire Wolves (89)
- Rabid Wolves (202)
- Black Panthers (2595)

Note that black bears do not appear because their skin is instead applied to “Food Bears” per §9.E.1 . The recommended predator for most maps is the standard wolf, whose packs were described in writings of the time as “shadowing Native American war parties, to exploit the aftermath of battle”.

Dire and Rabid wolves are more challenging alternatives, while Black Panthers represent the lurking horror of the North American cougar, which had not yet been extirpated from the Northeast by the time of the French and Indian War.

9.D - Random Statements

French and Indian War maps with highly ordered, “scenario feel”, shall implement random sizes of land features/configurations, forests, terrain types, resource storage, etc., through use of random statements or rnd to improve variety offered by the map.

9.E - Modules

The following sections are required thematic replacements for Age of Empires motifs, such as “wild boar”, starting scout, gaia markets, etc.

9.E.1 - Food Bears

There were no pigs in North America prior to introduction by Europeans. If a French and Indian War map would normally rely on “wild boar” as an early food source, it may use a black “food bear” instead.

9.E.1.a - Statistics

Black “Food Bears” possess the following statistics when compared as reference to the standard AOE2 wild boar, per Table 9.E.1.a below:

Property	Black “Food” Bear	Standard AOE2 Boar
Base Unit	Javelina	~
Food Amount	340	340
Behavior	Will relentlessly pursue any villager that harms it. No attack otherwise.	Will relentlessly pursue any villager that harms it. No attack otherwise.
Impervious to Villager Arrows?	No	No
Hit Points	23	45
Armor (melee, pierce)	(0, 0)	(0, 0)
Bonus Damage Resistance	0%	0%
<i>Melee Damage Reflection</i>	50%	0%
Regeneration Rate [HP/sec]	0.5	0
Base Line of Sight	5	4
Speed [tiles/sec] (walk, run)	(0.8, 0.96)	(0.8, 0.96)
Attack	7	7
Reload Time [sec]	1	2
Reference Only: Unloomed Villagers to Defeat	2	3

Table 9.E.1.a: Black “Food Bears” vs Boars

The final row of Table 9.E.1.a is “Reference Only”, derived from testing animals configured with statistics to match the rows above, and provided for the benefit of players. The test entailed gathering a group of villagers just

outside the engagement radius of both creatures, then right clicking to attack. Sending the quantity of indicated villagers without micromanagement would typically result in the death of one, injury of another, and of course death of the hunted animal. Results vary depending on RNG/pathing but improve dramatically with micromanagement and/or loom. Note that the vanilla AOE2 boar is stronger than the Black Bear.

9.E.1.b - Hero Glow

Black “Food Bears” have a golden aura characteristic of hero units, to remind players of their unique properties.

9.E.1.c - Code

Unit shall be configured through the lines of script in §10.A.

9.E.2 - Iroquois Scout

Cooperation with native tribes was decisive to many battles fought during the French and Indian War. If a French and Indian War map would normally rely on a harmful exploration unit, such as “scout cavalry”, it may use the “Iroquois Scout” instead.

9.E.2.a - Statistics

The Iroquois Scout consists of a modified Unit 2329 (Sparabara), to achieve the following properties, compared to the Dark Age Eagle Scout:

Property	Statistics	Dark Age Eagle Scout
Line of Sight [tiles]	8	5
Move Speed [tiles/second]	0.9	1.1
Hit Points	22	50
Armor (melee, pierce)	(1,2)	(0,2)
Attack	7	4
Reload Time [seconds]	4	2
Range [tiles]	0	0
Convertible?	Yes	Yes
Respects Formations?	No	Yes
Aura per §9.E.2.b?	Yes	No
Hero Glow	Yes	No

Table 9.E.2.a: Iroquois Warrior Statistics

9.E.2.b - Aura

The Iroquois Scout grants friendly units within 3 tiles +2 pierce armor. This Aura represents terrain familiarity and cover identification for allies.

9.E.2.c - Recruitment

The Iroquois Scout is trainable from the “Camp Barracks” (a unique building described in §9.E.6.a) within 15 seconds, for a cost of 75 gold.

9.E.2.d - Code

Unit shall be configured through the lines of script in §10.B.

9.E.3 - Wild Woman

While squaws such as Sacagawea did not battle among Braves, they were equally adroit in wilderness survival. If a French and Indian War map would normally rely on a harmless exploration unit, such as a “horse”, it may use the non-“Scythian Wild Woman” instead.

9.E.3.a - Statistics

The Non-“Scythian Wild Woman” consists of a modified Unit 2639 (Guacolda), to achieve the following properties, compared to the Horse Scout:

Property	Wild Woman	Horse Scout
Line of Sight [tiles]	8	4
Move Speed [tiles/second]	0.90	1.2
Hit Points	75	50
Armor (melee, pierce)	(2,2)	(0,0)
Attack	0	0
Convertible?	No	No
Population Space	1	0
Regenerates 30 [HP/min]?	Yes	No
Aura per §9.E.3.b?	Yes	No
Hero Glow	Yes	No

Table 9.E.3.a: Non-“Scythian Wild Woman” Statistics

9.E.3.b - Aura

The Non-“Scythian Wild Woman” heals all friendly units within 5 tiles at a rate of 20 HP/min. This Aura represents wilderness medicine.

9.E.3.c - Code

Unit shall be configured through the lines of script in §10.C.

9.E.4 - Ox Wagon

The Ox Wagon is an alternate starting mechanic, designed to provide a nomad experience without commonly associated disadvantages, such as early snowball combat. If a French and Indian War map would normally rely on three scattered villagers, it may use the Ox Wagon instead.

9.E.4.a - Skin

The graphics of the Ox Wagon belong to unit 1273.

9.E.4.b - Speed

The Ox Wagon is paced such that on any map size, it travels between adjacent corners (assuming compatible terrain) in 1 minute 45 +/- 1 seconds. In this way, the speed of the Ox Wagon depends on map size.

9.E.4.c - Vision

The Ox Wagon has vision radius scaled to reveal approximately the same area of unexplored map, regardless of movement speed selected through §9.E.4.b. Vision radius for the Ox Wagon is be 5 on a 240x240 map size.

9.E.4.d - Death

When deleted or killed, the Ox Wagon spawns a dismantled cart (1270) with vision radius 1, one male villager, and two other villagers.

9.E.4.e - Code

Unit shall be configured through the lines of script in §10.D.

9.E.5 - Native Villages

These communities may be used to represent various North American tribes, living in harmony with nature. If a French and Indian War map would include a neutral gaia market for players to trade with –or generic eye-candy tribal villages– then this section explains how.

9.E.5.a - Yurt Styles

There are no game assets providing authentic representation of North American native structures. Given genetic and lifestyle similarity to Mongolians, French and Indian War maps rely on yurt objects to create Native American villages, with options summarized in Table 9.E.5.a:

Class	Base Building	Appearance	Size [tiles]	Hitpoints
A	Market	Yurt A (712)	3 x 3 (resized from 4 x 4)	500
A	Yurt B (713)	Yurt B (713)	2 x 2	100
A	Yurt C (714)	Yurt C (714)	2 x 2	100
A	Yurt D (715)	Yurt D (715)	2 x 2	100
B	Market	Yurt H (719)	3 x 3 (resized from 4 x 4)	500
B	Yurt G (718)	Yurt G (718)	2 x 2	100
B	Yurt F (717)	Yurt F (717)	2 x 2	100
B	Yurt E (716)	Yurt E (716)	2 x 2	100
C	Market	Yurt L (1835)	3 x 3 (resized from 4 x 4)	500
C	Yurt I (1832)	Yurt I (1832)	2 x 2	100
C	Yurt J (1833)	Yurt J (1833)	2 x 2	100
C	Yurt K (1834)	Yurt K (1834)	2 x 2	100
C	Yurt M (2033)	Yurt M (2033)	2 x 2	100

Table 9.E.5.a: Available Buildings for Native American Villages

If a Yurt would be placed of a particular class, then any other Yurt placed within 20 tiles thereafter shall be of the same class. In this way, yurts of the

same village share a unified style, but villages of different style are allowed on the same map (if space allows).

9.E.5.b - Regeneration

The gaia buildings listed in Table 9.E.5.a shall regenerate 30 HP/min.

9.E.5.c - Chief's Hut

Per Table 9.E.5.a, Chief's Hut shall consist of a gaia market resized to 3x3, and packaged in the skin of its corresponding Yurt. In this way, the Chief's Hut is a trading opportunity for players.

9.E.5.d - No Big Yurts

Pursuant to §9.E.5.c, large yurts matching the appearance of any Chief's Hut are forbidden – to minimize player confusion, these graphics are reserved for reassignment to the Chief's Hut.

9.E.5.e - Optional Trade

Eye-candy villages without trading may be desired. The Chief's Hut described in §9.E.5.c is optional.

9.E.5.f - Eye-Candy

The following additional man-made eye-candy objects are recommended for Native Villages, but will not be individually inspected (instead supporting satisfaction of §9.C):

- Animal Skeleton (1091)
- Archaic Fence (2274)
- Bonfire (304)
- Crater (723)
- Flame (1333 - 1336)
- Goods (1321)
- Leatherworking Equipment (2291)
- Loot (472)
- Lumber (1320)
- Path (338 - 341)
- Rugs (711)

- Scaffolding (2644)
- Smoke (1308)
- Statue (Column) Carved Totem Facet (1322)
- Torch (499)
- Treasure Chest (2289)
- Water Pots (2491)
- Weapon Rack (2293)
- Weapon Stacks (2019)
- Wooden Bench (2523)

9.E.5.g - Forbidden

With exception of the buildings listed in §9.E.5.a, and the following objects:

- Canoe (778)
- Hunting Wolf (700)
- War Dog (2612)

Nothing requiring “set_gaia_unconvertible” shall be present in Native Villages. In this way, the French and Indian War maps do not feature native people in areas that players may wish to clear and expand into.

9.E.5.h - Near Nature

Bushes, trees, reeds, rocks, etc. are encouraged near or within Native Villages.

9.E.5.i - Example

Figure 9.E.5.i shows an example of a Native American Village:

Figure 9.E.5.i: Sample Native American Village

9.E.5.j - Code

Yurts described in §9.E.5 configured through the lines of script in §10.E.

9.E.6 - Forts

During the French and Indian War, rival powers constructed a number of fortifications at key frontier positions, typically portages between watersheds or choke-points along large bodies of water. This section defines their appearance.

9.E.6.a - Core

Each Fort shall contain at least one “Chief’s Yurt” (1870) and at least one “Ritual Flag C” (2015) as a flagpole. This “Chief’s Yurt” is simply how the game sees the object, and was selected due to no hotkey overlap. Heavily modified, it shall satisfy all of the below listed properties:

- Indicate “Camp Barracks” to players if selected, with barracks icon.
- Re-skinned to adopt the appearance of a thematic building (typically object 2437 “Camp Barracks”, but other graphics may be appropriate)
- Indestructible
- Reversibly gaia capturable
- 3 x 3 tile size
- Capable of garrisoning 10 of any unit that could fit in a castle
- Provides 10 population space to current owner
- For nomad-style maps: isolated from all player-controlled objects by at least dark age palisade walls (or stronger).

Due to these modifications, players will see this object as the “Camp Barracks”. Suggested code to achieve required properties is provided in

9.E.6.b - Accessories

Other recommended objects include (but are not limited to):

- Army Tent (2176)
- Lumber (1320)
- Abatis (2285)
- Maple Leaves (2030, 2031)
- Bonfire (304)
- Barrels (1330)
- Dismantled Cart (1270)
- Horses (835, 2092, 2093, 2094, 2095)
- Weapon Rack (2019)

- Wooden Bench (2523)

9.E.6.c - Impingement

Objects with non-zero collision radius that would impinge upon the “Core” described in §9.E.6.a shall be destructible with 1 HP.

9.E.6.d - Example

Figure 9.E.6.d shows an example of a Fort:

Figure 9.E.6.d: Sample Fort

Revision History:

<u>Revision</u>	Description	Change Document	Date (YYYY-MM-DD)
X1	Advanced Release for Community Review/Feedback	N/A	2026-04-28
X2	Added more flavor to Forts, such as garrison space, housing capacity, and removed annoying overlap with buildable barracks common hotkey.	N/A	2026-05-14
