1 - Definitions

The following definitions apply:

- *Grassroots* – Sourced anonymously, from a large population, where each contributor provides a relatively small investment.

2 - Overview

This informative document describes an open Alchemy AOE Community treasury system powered by cryptocurrency technology.

3 - Background

Over the past few years, Alchemy League generated interest among community members seeking to provide financial assistance, but there was no mechanism for a small community to build *grassroots* support. In addition, steep international currency exchange fees compelled an exploration of lower-cost alternatives. The emergence and stability of cryptocurrency has provided a system aligning with Alchemy's objectives.

4 - Treasurer

Contact TechChariot for questions or concerns related to the Alchemy Treasury.

5 - Solana Blockchain

The Alchemy Treasury operates using the Solana blockchain. Solana's Codebase is posted to Github and open to community contributions from anywhere in the world. It emphasizes fast, ultra-low transaction fees, network decentralization, and transparency – anyone anywhere can query balances and transactions corresponding to Solana or its derivative currencies, in **any** account (not just their own). For these reasons, Solana is Alchemy's choice of transfer cryptocurrency.

6 - System

The following graphic describes the flow of assets into and out of the Alchemy Treasury:

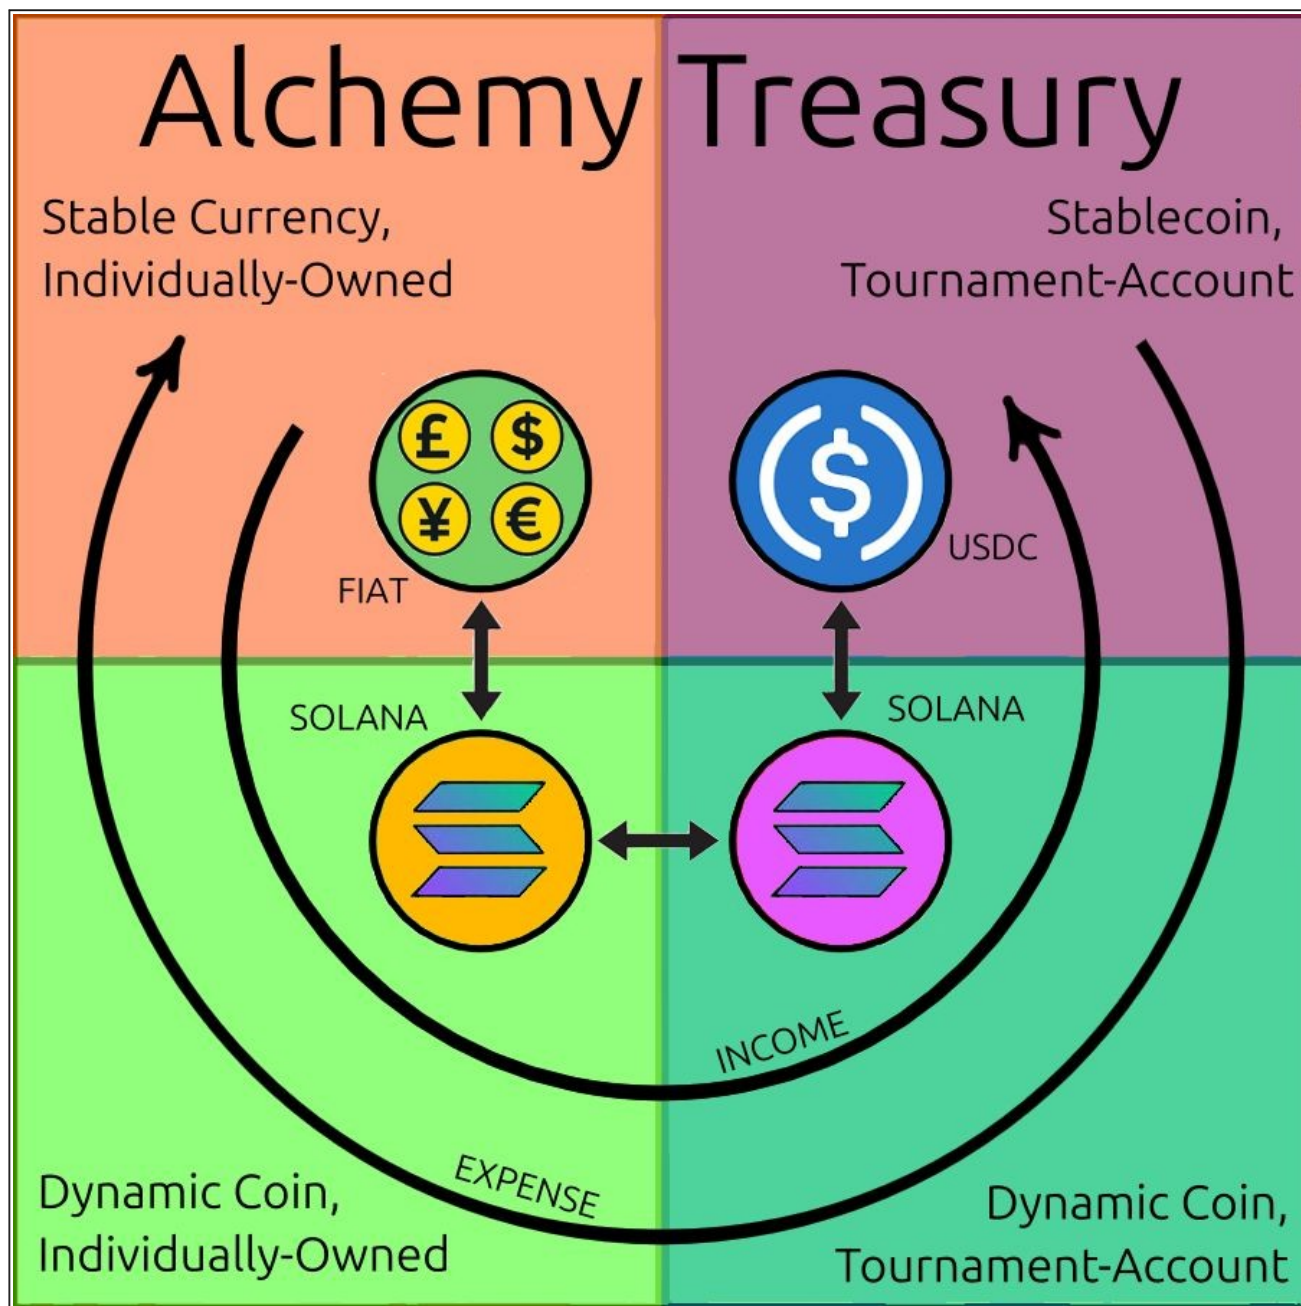

Figure 6: Alchemy Treasury Structure

6.A - Stages

Transactions for the Alchemy AOE Community have four stages, broken into two dichotomies: controller and stability:

~	Controlled by Individuals	Controlled by Tournament Wallet
Stable	Fiat	USDC
Dynamic	Solana (personal)	Solana (collective)

Figure 6: Alchemy Treasury Structure

Each of the stages is described in greater detail in subsequent sections:

6.A.1 - Fiat

State-backed currencies such as United States Dollars, British Pounds, Japanese Yens, Euros, etc., deriving value from government mandate and public trust. Can be used to purchase almost any good or service within the country that uses them.

6.A.2 - Personal Solana

Solana cryptocurrency controlled by private individuals who interact with the Alchemy Treasury.

6.A.3 - Collective Solana

Solana cryptocurrency controlled by the public account of the Alchemy Treasury.

6.A.4 - USDC

A stable cryptocurrency that employs unique mint-and-burn strategy to approximate the value of the United States Dollar. Although USDC does not have the potential to appreciate in value like many stocks or cryptocurrency investments, owning it long-term protects the value of the Alchemy Treasury against random market fluctuations.

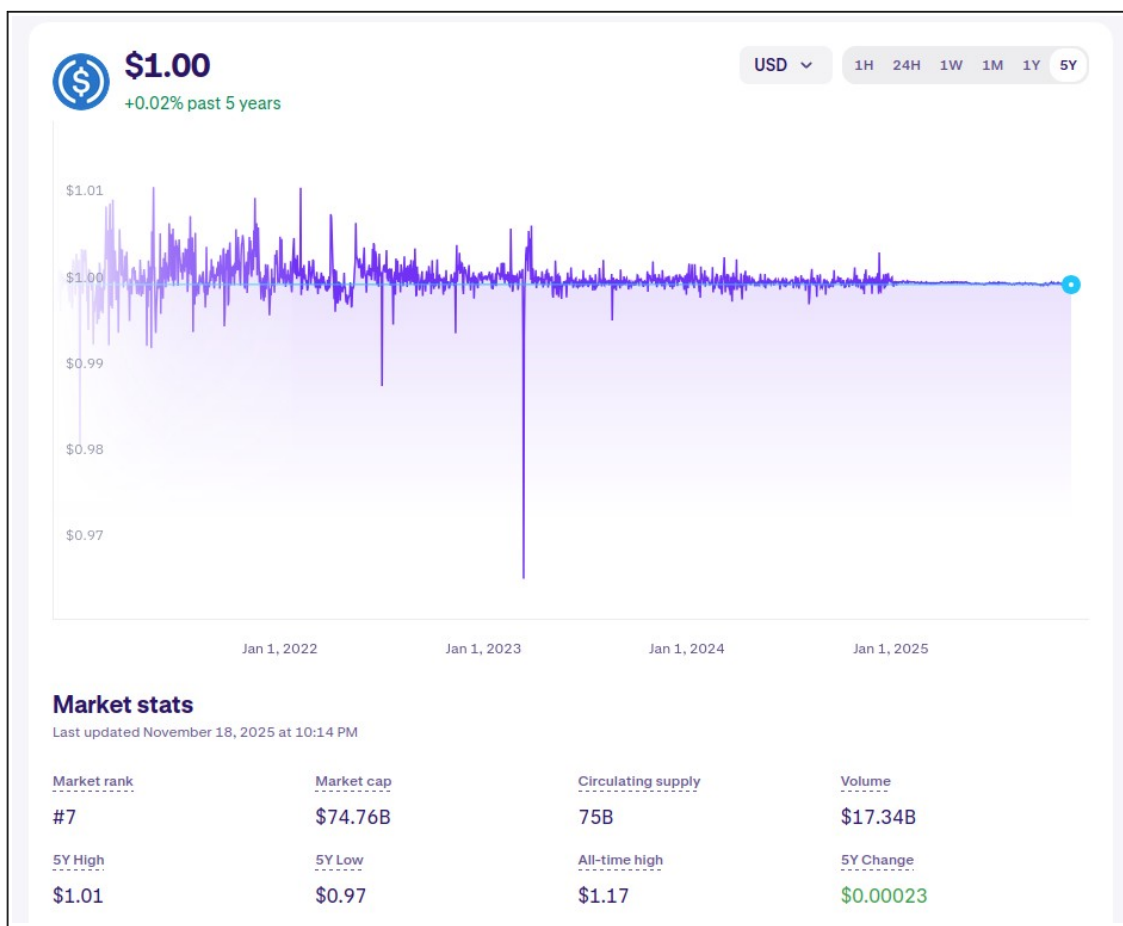

Figure 6.A.4: Cost of USDC in Real USD, Courtesy of Kraken

6.B - Transactions

The following transactions are necessary for money to enter or exit the *Alchemy Fund*. Note that the availability of different payment/cryptocurrency platforms may vary by country. Unless otherwise stated fees are typically extremely low – less than 0.5%.

6.B.1 - Fiat to Solana

Solana is easy to buy and may be purchased through Phantom Wallet/Stripe, Coinbase, Kraken, Binance, Paypal, etc.

6.B.2 - Solana to Fiat

Solana may be sold through most cryptocurrency exchanges, such as Coinbase, Kraken, Binance, etc., or even Paypal. Fees are steeper, generally 1% to 5%, depending on priority and platform, but still better than the average 5% – 15% that Alchemy had paid to Paypal over two years of direct currency exchanges.

6.B.3 - Solana Transfer

Solana may be transferred between accounts using any of the aforementioned platforms. As with all Cryptocurrency transactions, care should be taken to assure that the target wallet address corresponds to the agreed transaction currency – e. g. sending Solana to an Ethereum address will cause the assets to be lost forever.

6.B.4 - Solana and USDC Swap

Solana may be swapped for USDC or vice-versa. Fees are typically between 0.5% and 1.5%.

6.C - Processes

The Alchemy AOE Community is global and does business across a variety of native currencies.

6.C.1 - Expense

To pay a bill, the *Alchemy Fund* converts an appropriate amount of USDC into Solana, and then remits to the target address. The recipient may then sell the Solana for their native money using the cryptocurrency platform of their choice (Binance, Kraken, Coinbase, etc.).

6.C.2 - Income

The reverse of §6.C.1.

7 - Conditions

The System of §6 was designed to create an anonymous yet high-trust environment described in the following sections.

7.A - Transparency

Trust is an essential component of a grassroots collection system. Patrons are entitled to monitor the arrival of their donation see how it pays the bills.

7.A.1 - Ledger

The Alchemy Treasury will maintain a balance sheet containing at least the following information for each transaction:

- Timestamp (Universal Date Format)
- Type of Transaction (Income, Expense, etc.)
- Source Account
- Target Account
- Currency Type
- Amount Added or Deducted
- Transaction Signature Identification
- Transaction Inspection Hyperlink
- Running Balance of All Account Assets

Transactions may take a few minutes to fully resolve.

7.A.2 - Notifications

The Alchemy Treasury will issue notifications in a dedicated forum channel each time a transaction is completed. Such notifications will contain either all information described in §7.A.1 or a hyperlink to a location that does.

7.B - Anonymity

Financial culture in the Alchemy AOE Community –particularly donations– is designed for privacy within maximum transparency.

7.B.1 - No Public Unmasking

Public claims of association with any transactions will be removed from Alchemy AOE Community forums, and unacknowledged everywhere else. If a transaction does not appear or look correct, the Alchemy Treasury would be eager to resolve through private message.

7.B.2 - Donation Terms

Donating in support of the Alchemy AOE Community is an agreement to the privacy structure of its treasury, described in §7.B.1. This means that it is impossible to:

- publicly acknowledge and thank specific donors.
- to inspire a specific mandate by donating.
- be refunded for a donation.

7.C - Transaction Scheduling

7.C.1 - Income

To protect the value of donations from market volatility, the Alchemy Treasury will swap incoming Solana for USDC within 48 hrs.

7.C.2 - Expense

To minimize fees from cryptocurrency swaps, the Alchemy Treasury will organize payment periods so that a single larger sum of USDC is converted to Solana at once, rather than multiple, piecemeal conversions. Tournament handbooks will typically specifically when this conversion will occur. Within minutes of transforming USDC into Solana, payments begin. If the Alchemy Treasury does not have a receiving Solana address for any earner by that time, it will assume an intent to donate back to the community and send the Solana originally intended for that recipient to the Alchemy Treasury address instead.

8 - Phantom Wallet

The Alchemy Treasury maintains a Phantom Wallet account.

8.A - Solana Address

AUfgTpkX7zTQgDyTtpa7SmpatcFE2RwrbPf4C52KgfzE

9 - Conclusion

This informative specification describes a Treasury system for the Alchemy AOE Community powered by Solana. The public and open-source nature of this blockchain allows Alchemy to protect donor privacy while remaining transparent and audit-able. A currency swap process was also described to assure stability of financial contributions against the United States Dollar. Finally, Solana is generally more available in underprivileged locations than legacy currency exchange platforms, allowing almost all participants or creators to redeem their earnings.
