1 - Referenced Documents

Table 1 below is a list of all specifications that are components to this one. Each of its entries were designed as an interchangeable part, to be used in context for this specification, or others like it:

Specification Number	Nomenclature
<u>GSRM-RAND-1</u>	General Requirements, Super-Randoms

Table 1: Bill of Materials

If any part of any documents listed in Table 1 conflict with this specification, then this specification shall assume priority.

2 - Definitions

The following definitions apply:

- *Origin of Player Lands* – Location of town center.

3 - Overview

This component specification defines requirements for a general-purpose Super Random style map to be used in an Alchemy AOE Competition.

4 - General Characteristics

The requirements of GSRM-RAND-1 apply unless superseded by this specification.

5 - Rule Changes

5.A - Guard State

Hyperrandom shall configure the possibility of a “guard_state” to add an additional lose condition. The affected object shall be either a standard King named “regicide game” or a large building named “defend the wonder”. Losing the affected object will cause a player to be defeated.

5.B - Starting Resources

Hyperrandom shall configure the possibility of changing player *starting resources*. Starting food, wood, stone may altered by +/- 100, while starting gold may be altered by +/- 50.

5.C - Additional Hunttable Animals

Hyperrandom shall configure Penguins, monkeys, camels and horses to be hunttable for food in the same way that deer, zebra, ibex, etc. are hunttable.

5.D - Map Size

Hyperrandom may increase map edge length by up to:

- 10% on forest maps, and
- 20% on water maps.

6 - Land Configuration

Hyperrandom shall be arranged generally per Figure 6 below:

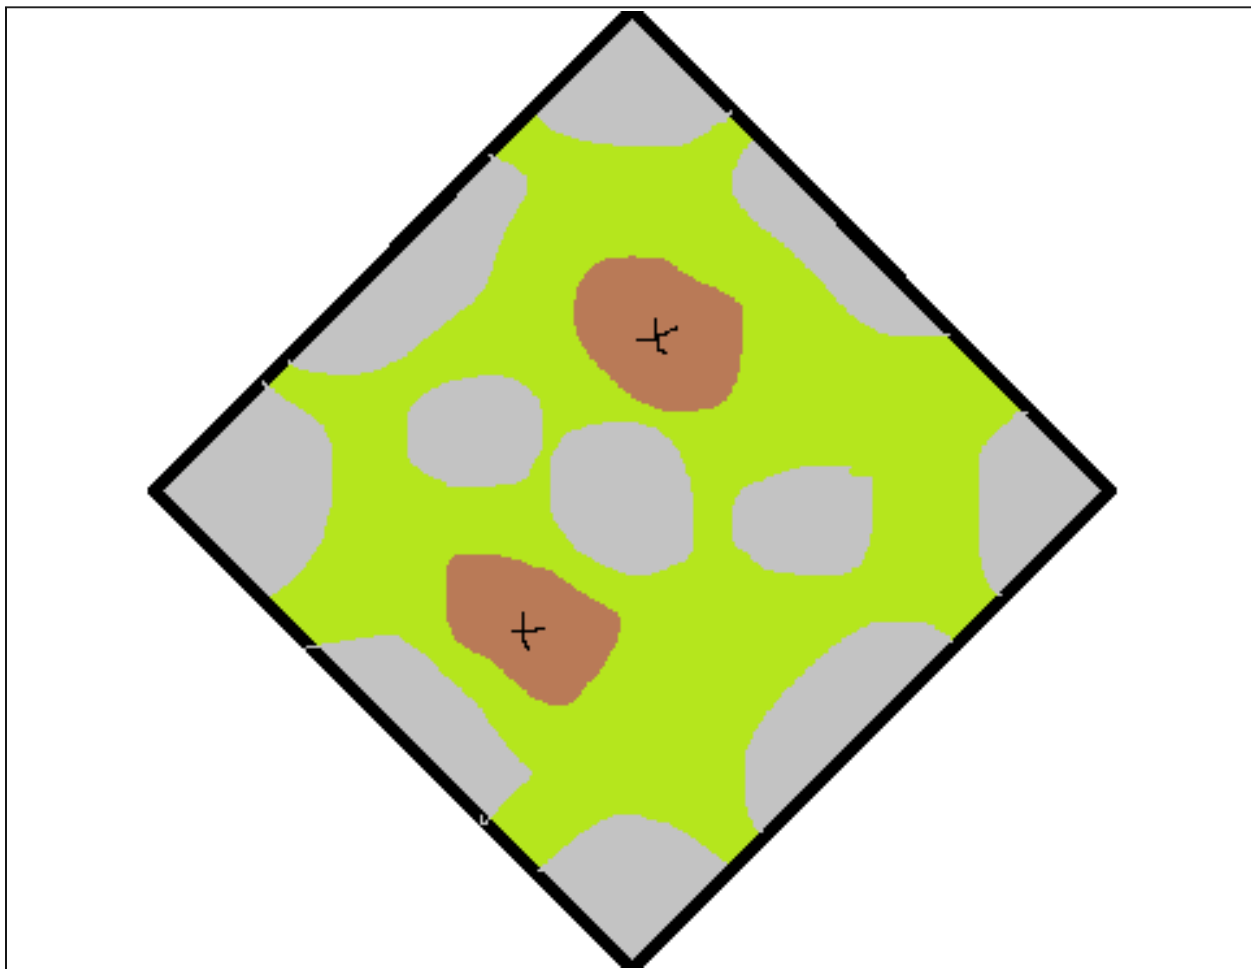

Figure 6: Hyperrandom General Configuration

6.A - Zones

In this way, three zones are established, described as follows:

6.A.1 - Player Lands

Brown areas, located anywhere except the center or the corners of the map. May be doubled in quantity from what is portrayed in Figure 6.

6.A.2 - Neutral Lands

Gray areas, optionally located in any of the areas shown (corners, center, sides, on the radius of the players). Neutral lands will not necessarily be present in all or even any locations.

6.A.3 - Outland

Any area not belonging to the aforementioned zones.

7 - Elevation

Elevation may be present on any terrain, including water terrains.

8 - Terrains

8.A - Outland

May be open land, water, or forest terrain in any combination and/or interrupted by connecting passages/channels to other zones.

9 - Objects

9.A - Player-Assigned Objects

Starting objects assigned to players the Table below:

Type	Quantity		Notes
	Minimum	Maximum	
Town Center	0	3	Object 444, known as “Town Center (Packed)” may rarely be spawn as an additional exploration/unpackable unit.
Villager	3	11	Up to 18 if a Regicide start is generated or 28 if an Empire Wars start is generated.
Ring of Walls	0	2	May be any type of wall, even those not available to construct.
Exploration Unit	0	3	Selected from large pool of potential units, depending on the type of Wall Ring (if any) and/or the presence of at least 1 Town Center. Includes ranged units.
Ship	0	1	May spawn for each player if water is present on the map.
Building	0	~	Selected from large pool of potential options, including buildings that cannot be constructed.

Table 9.A: Variations Upon Player-Assigned Objects

9.B - Double Starting Base

If the doubling described in §6.A.1 is selected, then Player-Assigned Objects described in Table 9.A shall apply to both locations.

9.C - Neutral Objects

9.C.1 - Resources

9.C.1.a - Fairness

Player-assigned resources on Hyperrandom shall be of similar quantity to standard maps. Due to the high degree of variation, and the presence of *sufficient* Player-Assigned resources, exception is granted for bias in neutral resource distribution.

9.C.1.b - Additional Clumps

Hyperrandom shall configure Neutral Lands for the possibility of holding clusters of additional resources.

9.C.1.c - Amount Variation

Hyperrandom shall configure resource piles to contain between 50% and 150% of their ordinary amounts.

9.C.2 - Gaia Buildings

9.C.2.a - Trading Locations

Hyperrandom shall configure the possibility of unconvertible and indestructible gaia docks and/or markets spawning as potential trading locations.

9.C.2.b - Lighthouse Buildings

Hyperrandom shall configure the possibility of convertible and indestructible gaia outposts, towers, or pyramids spawning as vision-enabling capture points, providing line of sight to the player who most recently had more nearby units.

9.C.2.c - Guarded Monument

Hyperrandom shall configure a very small chance of a convertible gaia monument spawning in the center of the map. This monument shall provide no resource trickle but allow the training of a variety of normally untrainable units. This monument may be protected by unconvertible defensive gaia units.
