1 - Referenced Documents

Table 1 below is a list of all specifications that are components to this one. Each of its entries were designed as an interchangeable part, to be used in context for this specification, or others like it:

Specification Number	Nomenclature
<u>GSRM-RAND-1</u>	General Requirements, Super-Randoms

Table 1: Bill of Materials

If any part of any documents listed in Table 1 conflict with this specification, then this specification shall assume priority.

2 - Definitions

The following definitions apply:

- *Origin of Player Lands* – Location of town center.

3 - Overview

This component specification defines requirements for a nomad Super-Random style map with juxtaposed and scattered biomes to be used in an Alchemy AOE Competition.

4 - General Characteristics

The requirements of GSRM-RAND-1 apply unless superseded by this specification.

5 - Rule Changes

This section is intentionally left blank.

6 - Land Configuration

BiomeBlitz shall be arranged generally per the “fruity pebbles” of Figure 6 below:

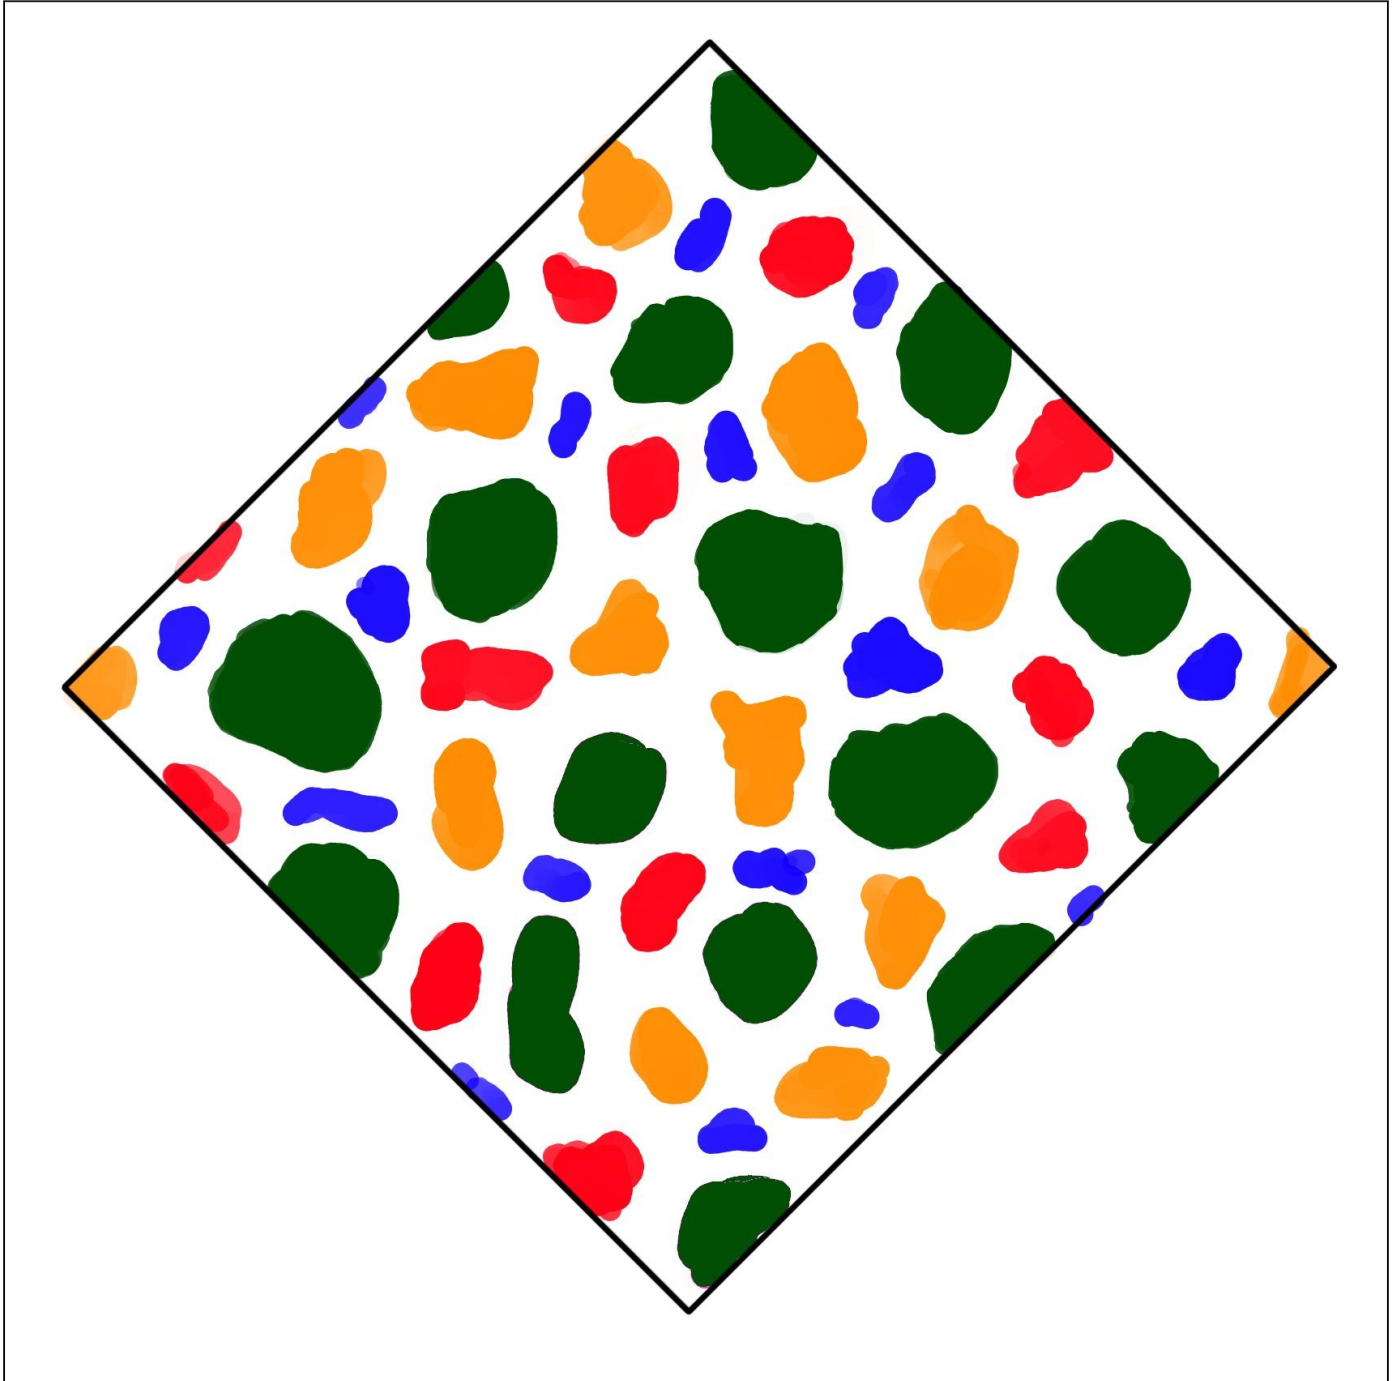

Figure 6: BiomeBlitz General Configuration

6.A - Zones

In this way, fives zones are established, described as follows:

6.A.1 - Biome Class

Biome Class Zones described thusly:

6.A.1.a - Biome1

Green areas.

6.A.1.b - Biome2

Yellow areas.

6.A.1.c - Biome3

Red areas.

6.A.1.d - Biome4

Blue areas.

6.A.2 - Base

Any area not belonging to the aforementioned zones.

6.B - Origin of Player Lands

As a nomad map, BiomeBlitz shall have no *Origin of Player Lands*.

6.C - Randomizations

BiomeBlitz shall randomize relative areas between each class of Biomes and number of “islands” for each Biome Class per §Error: Reference source not found, as well as the spacing per §Error: Reference source not found.

6.C.1 - Positioning

Biome Class Zones shall be scattered as “islands” in approximate uniformity across map area, avoid location [50, 50] by no more than 15% map edge length.

6.C.2 - Spacing

Distances between Biome Class Zones described in §6.A.1 shall be randomly selected within the range of 0 to 5 tiles, inclusive.

6.C.3 - Area

6.C.3.a - Zone-Wise Total

The sum of all “island” areas belonging to any one class of Biome per §6.A.1 shall encompass between 10% and 30% of the total map area. In this way, acceptable combinations of such biomes may include [30, 30, 30, 10], [20, 20, 20, 20, 20], [30, 20, 10, 10], etc., assuming satisfaction of requirements in §6.C.1 and §6.C.2.

6.C.3.b - Island Size Variation

Each “island” belonging to a Biome Class Zone shall be of similar size to other “islands” of the same class.

6.C.4 - Count

The number of “islands” corresponding to each Biome Class Zone is immaterial provided that the quantity selected satisfies all other constraints. Randomization of “island” quantity is encouraged where possible.

7 - Elevation

7.A - Biome Class

Elevation shall be 1 or 2, with possibility of taller scattered hills.

7.B - Base

Elevation shall be 0, with possibility of scattered hills up to elevation 1.

8 - Terrains

8.A - Biome Class

8.A.1 - Types

Unique random themes shall selected from Table 8.A.1 and assigned to each of the Biome Class Zones, described in §6.A.1:

Radioactive/Volcanic	Mangrove Marsh	Lakes
Desert	Savannah	Cracked
Dirt4	Dirt	Frozen Lakes
City/Urban	Farmland	Pasture
Snow	Heavy Snow	Moorland
Leafland	Barren	
Mangrove Maze	Plains	

Table 8.A.1: BiomeBlitz General Configuration

Each theme named in Table 8.A.1 shall encompass an appropriate mixture of open-land terrains, forests, and possibly beaches/shallows, fitting to its name.

8.A.2 - Exclusivity

No one theme from Table 8.A.1 may be repeated across two ore more Biome Class Zones of a single generation. In this way, each generation shall present four unique Biome Class Zones or “island” types.

8.B - Base

The Base shall possess terrain classes corresponding to Table 8.B:

Shallow/Mangrove Shallow	Cracked	Unbuildable Land
Open Land	Forest	Beach

Table 8.B: BiomeBlitz Base Terrains

9 - Objects

9.A - Starting Objects

Each player shall start with 1 villager per biome, with the following exceptions:

- When a desert biome is selected, each player shall have a chance of starting with a Bactrian camel in addition to a villager.
- When a city biome is selected, each player shall have a chance of starting with an additional one to three villagers and a house. If additional villagers and a house are placed, all players shall receive equal of the extra units.
- When a radioactive biome is selected, each player shall ~~start with a Photon man instead of a villager.~~ TBD
- When a barren biome is selected, players shall start with a Photon man in addition to a villager.
- If a radioactive biome and a barren biome occur in the same generation, each player shall be given only one Photon man.
- If the plains biome is selected, each player shall be given a horse scout

9.B - Resources

9.B.1 - Fish/Oysters

Shore Fish, Deep Fish, and Oysters shall appear only in the Base Zone if and appropriate theme with compatible terrain is randomly selected (E. G. water). These resources shall not appear elsewhere.

9.B.2 - Relics

The total number of relics shall vary from 2 to 8, depending on which themes described in Table 8.A.1 are applied to the Biome Class Zones.

9.B.3 - Base Guarantees

If none of the themes selected for each of Biome Zones possess any one type of resource (E. G., no forests or gold mines), then they shall be placed in the Base Zone.

9.C - Convertible buildings

Some biome themes will include at least one gaia capturable outpost per player. All other buildings are unconvertible eye-candy.
